GENUINE BRAKE HARDWARE KIT COMPONENTS

Anchor Pins

Euclid anchor pins are case-hardened for longer life. Euclid MEGA PLUS™ anchor pins are hard chrome or zinc plated for corrosion resistance.

Euclid STOPMATE PLUS™ pins are zinc plated for maximum corrosion resistance.

All Euclid anchor pins provide a close fit between pin and shoe, yet allow the shoe to move freely.

Brake Shoe Rollers

Euclid "Posi Plus" shoe rollers add smooth radius edges to prevent flatspotting on the roller surface. When uneven brake cam pressure occurs, pressure is distributed evenly across the radius-edge surface of the roller to prevent cracks that lead to flat spots.

Euclid "Posi Plus" brake shoe rollers are included in MEGA PLUS and STOPMATE PLUS hardware kits.

Stainless Steel Anchor Pin Bushings

Euclid MEGA PLUS high-grade stainless steel anchor pin bushings feature an exclusive "dimpled" inner surface, which retains lubricant for easier pin removal.

Euclid STOPMATE PLUS kits feature high-grade stainless steel for corrosion resistance.

Brake Return Springs

Shot peening removes surface flaws – important under stress, since any flaws or forming marks become the weakest part of the spring. High-grade wire retains high spring tension for durability.

Euclid MEGA PLUS kits feature only heavy-duty 100-pound tension return springs.

Wire Roller Retainer

Coated to guard against corrosion, which can cause the brake shoe rollers to bind and accelerate camshaft wear.

BRAKE CAMSHAFTS for Tractors and Trailers

TOUGH... DURABLE... RELIABLE

As the heart of the foundation air brake system, the brake camshaft must be designed and manufactured to meet the demands of today's harder working heavy-duty brakes.

State-of-the-art technology is utilized to manufacture all Euclid brake camshafts. From computer numerically controlled (CNC) turret lathes to computer controlled heat treating equipment, genuine Euclid camshafts are made tough, durable and reliable.

STATE-OF-THE-ART MANUFACTURING

The first step in manufacturing a quality camshaft is forging the head to the correct shape and size.

Next, the shaft is machined "on centers" using computer controlled turret lathes. This guarantees accurate sizing of the bearing journals and cam head/shaft concentricity.

Finally, the shaft splines (28 and 37 tooth) are machine rolled, not broached, for greater strength and dimensional integrity.

To ensure the quality of the finished product, statistical process control (SPC) is utilized in each stage of the manufacturing process.

HEAT TREATING PROVIDES THE FINISHING TOUCH

Heat treating is essential to long-term camshaft performance. Therefore, critical areas, such as the cam head and shaft splines, are induction hardened to prevent accelerated wear and premature failure.

COMPLETE THE JOB WITH GENUINE EUCLID CAMSHAFT REPAIR KITS

Restoring your truck, tractor or trailer brakes to their OEM performance level requires more than a new camshaft. The bushings, washers, seals and lock rings should also be replaced to complete the job.

How to use this Euclid E.S.P. Guide

1. Measure Camshaft Length. All Euclid Camshaft Lengths are measured from **under the camshaft head to the beginning of the lock ring groove.**

2. Locate approximate camshaft length in guide (Camshafts are listed in order of length, from shortest to longest).
3. After finding camshafts in the approximate length area, determine Camshaft Head Type, using Head Type photos and Head Width Dimensions.
4. Narrow your final selection by Spline, Journal Diameter, and any other notes listed.

Note 1 - Meritor Trailer Camshaft Journal Length and Hardware Selection

With the two different Meritor trailer camshaft journals, care must be taken to match the camshaft with the correct journal length (from under head to first snap ring groove) to the proper hardware. If the proper hardware is not used with these camshafts, damage can occur to foundation brake components, resulting in possible brake failure. Camshafts with the 2 5/64" journal length will work in all applications, but E-9075 Spacers will be needed with certain spiders (see table below).

SPIDER TYPE	JOURNAL LGTH.	E-9075 NEEDED?	CAMSHAFT REPAIR KIT
Cast or Fabricated with Weld-on Bushing Retainer	1 25/32"	NO	E-3520A, E-3520AHD, E-3989AHD, or E-9078HD
	2 5/64"	YES	E-9078HD (contains E-9075 Spacers)
Fabricated with Bolt-on Bushing	2 5/64"	NO	E-9079HD (contains E-6076 Bolt-on Bushings)

Note 2 - Spicer (Dana) 12 1/4" Camshaft, Brake Shoe and Hardware Selection

The two current Spicer 12 1/4" camshaft designs that Euclid offers are the Standard head (Type 3 on E.S.P. Guide), and the second design "Fast-Rise" head, with "0794" OE head marking (Type 5 on E.S.P. Guide). Below is application information on these two camshaft series, along with the associated Euclid Brake Shoe and Repair Kit part numbers required.

The first design "Fast-Rise", with "M12" OE head marking (part numbers E-6083 through E-6100), have been discontinued by Spicer and Euclid. Standard and first design "Fast-Rise" camshafts can be replaced in pairs with second design "Fast-Rise" when using the correct shoe and roller (see below). Do not mix standard, first design or second design "Fast-Rise" camshafts on a single or tandem axle.

"Extended Life" Camshafts

Euclid's "Extended Life" descriptions apply to Meritor's "Q Plus", Spicer Dana's "Xtralife", and Eaton's "ES". For look-up purposes, Euclid groups these 16 1/2" versions together. Meritor "Q Plus", Dana "Xtralife", and Eaton "ES" are registered trademarks.

When retrofitting from standard head to "Extended Life" camshafts, Euclid strongly recommends replacing both camshafts on a single axle or all camshafts on a tandem axle to promote a balanced brake condition. To retrofit standard or first design "Fast-Rise" Spicer 12 1/4" camshafts, see **Note 2**, above.

Meritor 16 1/2" Steer Axle "Hammer Claw" Camshaft Replacement

To replace Meritor's discontinued "Hammer Claw" camshafts on 16 1/2" steer axle brakes, use the same length "Q Plus" camshaft and the E-9643 offset-center bar return spring (Brake Repair Kit E-9644). The spring must be installed with the end hooks open toward the camshaft head. The E-9643 return spring can also service the "Hammer Claw" camshaft.

All Euclid Cam Lengths are measured from **under Cam Head to beginning of Lock Ring Groove.**

Important Note: These cams are "extended life" versions of this manufacturer's "standard version". If retrofitting from "standard" to "extended life" camshafts, Euclid strongly recommends replacing both cams on a single axle or all cams on tandem axles to promote a balanced brake condition.

"Heavy-Duty" — Long Life

KEY	FEATURE	BENEFIT
1	Bushing is made from molybdenum disulfide impregnated material.	Holds grease better, longer and provides a surface that has greater lubricity.
2	Grease fitting extends directly to inside diameter of the bushing.	Positive greasing action! Grease flows directly to camshaft surface. Only two pumps with a grease gun lubricate this bushing.
3	Wide grease-following groove around the inside diameter of the bushing.	Carries grease completely around the camshaft surface. Camshaft journals do not run "dry", extending camshaft life.
4	Lateral grooves help distribute grease.	Positive greasing action.
5	O-rings installed in grooves inside the bushing.	Seals grease in and contaminants out! Entire assembly lasts longer. Lowers costs and downtime.

FEATURES AND BENEFITS

A. ASA Housing

- Flexible design options provide improved packaging:
 - "Handed" and "unhanded" versions fit various packaging requirements (unhanded version shown).
 - Lightest weight automatic slack adjuster in the market.

B. Piston

- Various pistons to adapt to unique vehicle vocations and duty cycles.

C. Boot

- Press-in and sealed for maximum durability.

D. Pull Pawl

- Design eliminates the need to remove pawl for manual brake adjustment.
- Built-in safety feature so brake cannot inadvertently be backed-off.

E. Worm Gear

- Buttress type provides increased strength for longer life.
 - Lubrication hole and groove provide lubrication to splines, helping eliminate corrosion and seizing up, and resulting in easier servicing.

F. Gear Face Seals

- Help decrease internal contamination and corrosion, minimizing internal torques.
 - Eliminates sensitivity to external road debris, etc., resulting in reduced internal torques.

G. Worm Seal

- Worm seal prevents water gaining access to worm gear shaft.

H. Manual Adjusting Nut

- As a safety precaution, manual adjusting nut cannot be inadvertently backed-off.

How the Meritor Automatic Slack Adjusters Work:

When the brakes are first actuated...

- The air chamber pushrod moves beyond the predetermined optimum stroke length.
- The change in geometry between the chamber pushrod and slack lever arm raises the slack adjuster actuator rod.
- the piston contacts the retaining ring which lifts the actuator.
- The actuator has spiral serrations on it which jump over the serration on the pawl, only if the adjustment is required.
- The components remain in the position until the start of the return stroke.

The Adjustment Phase

- The returning movement of the air chamber pushrod and slack lever arm on the brake release, forces the ASA piston and then the actuator downward.
- Contact between the pawl and actuator teeth cause the actuator to rotate.
- The rotation of the actuator in its downward travel causes the worm to rotate.
- The rotation of the worm causes the gear to rotate.
- The gear rotates the camshaft (cam brake) or powershaft (air disc brake) so that proper brake adjustment is maintained.

HEAVY-DUTY BRAKE DRUM GAUGE KIT

EUCLID NO.

DESCRIPTION

APPLICATION INFORMATION

E-9136

Heavy-Duty Brake Drum Gauge Kit

To quickly and easily measure scored, worn or heat-checked brake drums. Includes: Heavy-Duty Brake Drum Gauge, Gauge Calibration Tool, Euclid red hard plastic shell with padded interior to protect the Brake Drum Gauge.

Measures any brake drum from 12" to 18" diameter in 1/4" increments. Both end tips of gauge are made with hardened steel balls inserted at contact points for accuracy and service. Easy-to-adjust slide bar shows exact drum diameter to be checked.

E-9139

Brake Lining/Block Thickness Gauge

Simplifies checking standard and oversized brake lining. Readings can be recorded in either percentages or linear measure.

SLACK ADJUSTER PULLERS

EUCLID NO.

SLACK TYPE

APPLICATION INFORMATION

E-9319

Manual

Eases the job of removing frozen slack adjusters. Available for Manual and Automatic Slack Adjusters. Slack Pullers have only one moving part and require only a wrench to use them. There are only four simple steps to follow to use the tools:

E-9320

Automatic

1. Remove the grease fittings from the slack adjuster.
2. Slide the puller onto the slack adjuster body.
3. Turn the bolt on the puller. The bolt is self-aligning for quick positioning.
4. Catch the slack adjuster as it comes off the camshaft.

CLEVIS PIN PRESS

EUCLID NO.

APPLICATION INFORMATION

E-3379

10,000 lb. capacity press shears cotter pin and pushes out

ROLL PIN PUNCH TOOL

WHEEL SERVICE TOOLS

FOR USE WITH 1" DRIVE AIR IMPACT WRENCH ONLY

AccuTorq Truck Torque Wrenches Designed to Help Prevent Overtightening Wheel Nuts

- * For use with 1" air impact wrenches
- * For 1 1/4" to 1 1/2" hex truck wheel nuts
- * For 13/16" square head inner cap nuts
- * Covers a torque of 475 ft. lbs.

How Does AccuTorq Work? When the wheel nut is tightened to the maximum torque indicated on the AccuTorq wrench, the socket stops moving forward. Strobe marks on the socket end of the wrench visually indicate when the socket has stopped turning. This is possible because the shaft of the AccuTorq wrench acts as a torsion bar and starts to wind when the impact wrench tries to overtighten the wheel nut. When the hammer inside the impact wrench rotates for the next impact, the AccuTorq shaft unwinds. As a result, the socket end of the AccuTorq wrench stops turning while the drive end advances, then retreats with each impact of the impact wrench. The wheel nut is not tightened any further.

AccuTorq wrenches must be used with the impact wrench size indicated in order to assure proper accuracy. Use of extensions or reducers will reduce accuracy of AccuTorq wrenches. Do not hold the AccuTorq wrench's shaft while in use, or the effect of the tool will be dampened. AccuTorq wrenches are accurate to plus or minus 15% of the stated maximum torque limit.

Features

Angular Contact Bearing

The angular contact bearing is precision ground and designed to carry both radial and axial loads for the fan blade weight and thrust. All angular contact bearings are packed in a high temperature synthetic grease for maximum bearing life.

Air Plunger Valve

The air plunger valve is impregnated with graphite carbon for self lubrication and maximum heat. The mating metal air seal is machine ground to tolerances that virtually eliminate air leaks.

Non-asbestos Friction Linings

Non-asbestos friction linings are manufactured for high heat and maximum fan blade horsepower to maintain optimum cooling. With proper air pressure, the linings have virtually no slipping or glazing.

Precision Cut Spacers

Precision cut spacers extend the life of the fan clutch and reduce breakdown and maintenance by reestablishing OE tolerances within the fan clutch.

EUCLID AFTERMARKET PARTS WARRANTY

We warrant all new parts for one year from date of shipment to the buyer against defective material or workmanship (but not against damage caused by accident, abuse or improper installation, maintenance or repair) when such parts are used on vehicles the specifications of which have been approved by our Engineering Department.

As the exclusive remedy under this warranty, we will, at our option, repair or replace such parts free of charge, or take back the nonconforming parts and refund the monies paid by buyer for such parts, if found on examination by us to be nonconforming and if any necessary return charges are prepaid.

If it is necessary to return any parts under this warranty, buyer agrees not to make any deduction on account thereof from remittances on current accounts while claims are in the process of disposition. Any expense incurred without our consent for repairs or replacement will not be allowed.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES OR CONDITIONS, EXPRESS, IMPLIED OR STATUTORY, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR PARTICULAR PURPOSE. IN NO EVENT SHALL SELLER BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY NATURE.

Only genuine replacement parts are covered by this aftermarket parts warranty.
