TRUCK, TRAILER & BUS SHOCKS

Evolution to Higher Performing Shocks

The higher performance demands of today's vehicles require shocks that stand up to the challenge.

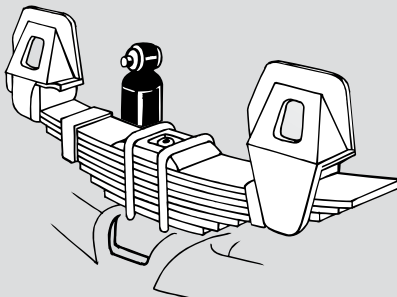

Heavy multi-leaf suspensions have very limited travel and a high level of inherent friction. The multi-leaf quickly dampens suspension oscillation and therefore limits the amount of work shock absorbers need to perform.

Today's low friction suspensions, such as Air Spring and Taper Leaf, are engineered to have very little suspension damping friction and a great deal of vertical travel. These characteristics enhance the operational control and performance of today's vehicles. Plus, they help reduce physical strain on the driver by isolating equipment and its cargo from highway vibration damage.

Overall, low friction suspensions have increased the need for control of suspension oscillation increasing the importance of peak performance by the shock absorber.

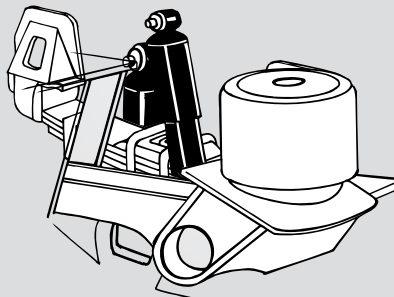

Multi-Leaf Suspension

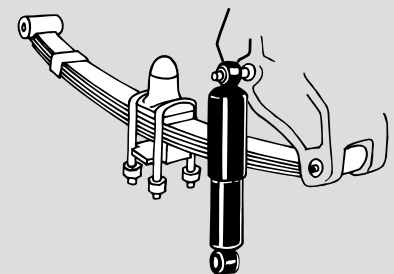

The inherent damping friction limits suspension travel to 2-3".

Air Spring Suspension

The damping responsibility has been shifted over to shocks. These suspensions can travel in excess of 9".

Taper-Leaf Suspension

Gabriel®

TRUCK, TRAILER & BUS SHOCKS

GasSLX (Heavy Truck Gas Shocks/Adjustable)

89000 Series

Our premium adjustable Heavy Truck gas shock.

- Unique Gas Cell double seals for superior gas retention
- Three position adjustable offers personal ride selection
- 1-5/8" bore, 360° arc welded end mounts provides improved durability
- Specially formulated High Temperature fluid reduces friction and wear in extreme operating conditions
- Many more premium component upgrades combine to provide the ultimate in performance and durability

FleetLine (Heavy-Duty Truck Shocks)

83000 Series*

A heavy duty product, best suited for light trucks or heavy truck suspensions where clearance is an issue.

- 1-3/8" bore
- 10 stage valving

85000/85300 Series*

Added durability makes these two series the standard heavy duty product for today's low friction suspensions.

- 1-5/8" bore provides improved durability
- 360° arc welded end mounts protect against end mount breakage
- Hydraulic rebound stop¹ prevents impact damage to the shock and vehicle mounting components
- Multi-lip piston rod seal provides backup seal protection
- Welded closure for maximum tensile strength

85700 Series*

Designed for unique truck applications and for severe duty bus applications. The specialty features of this series ensure a long consistent operating life.

- 1-5/8" bore with a bulged design provides increased fluid capacity for cooler operation
- Patented rod seal material significantly increases the life of the seal
- Custom blended HT Fluid reduces friction and wear in extreme operating conditions
- Plus all of the specialty features contained in the 85000 & 85300 Series

* Self compensating piston seal provides consistent damping throughout shock life

¹ Where required.

Gabriel®

TRUCK, TRAILER & BUS SHOCKS

FleetLine Cab Shocks

Cab Shocks

Designed specifically to eliminate cab vibration.

- 1", 1-3/16", 1-3/8", 1-5/8" bore sizes provide customized suspension for different cab designs
- Unique Gas Cell³ design reduces fade as result of fluid aeration
- Exclusive 10 stage valving provides a consistent ride at all speeds
- Premium chrome plated piston rod designed for corrosion resistance and reduced rod seal wear
- Multi-lip piston rod seal provides backup seal protection and increased durability

Gas Light Truck

G6000 Series

For consistent performance you can count on.

Targeted at standard light truck and van applications.

- 1-3/8" bore
- Gas charged
- Piston rod and radial lip seal
- Non-commercial applications only

Steering Stabilizers

- Reinforced arc welded end mounts protect against end mount breakage and provide improved durability
- Unique Gas Cell design separates air and oil so shock functions properly while in the horizontal position
- Custom designed (OE styled) mounts for improved fit and increased durability

Shock absorbers engineered with the same focus on quality, design, longevity and endurance that has come to characterize our world renowned Original Equipment shock absorbers.

³ Where design permits.

Gabriel[®]

TRUCK, TRAILER & BUS SHOCKS

FleetLine Cab Shocks¹

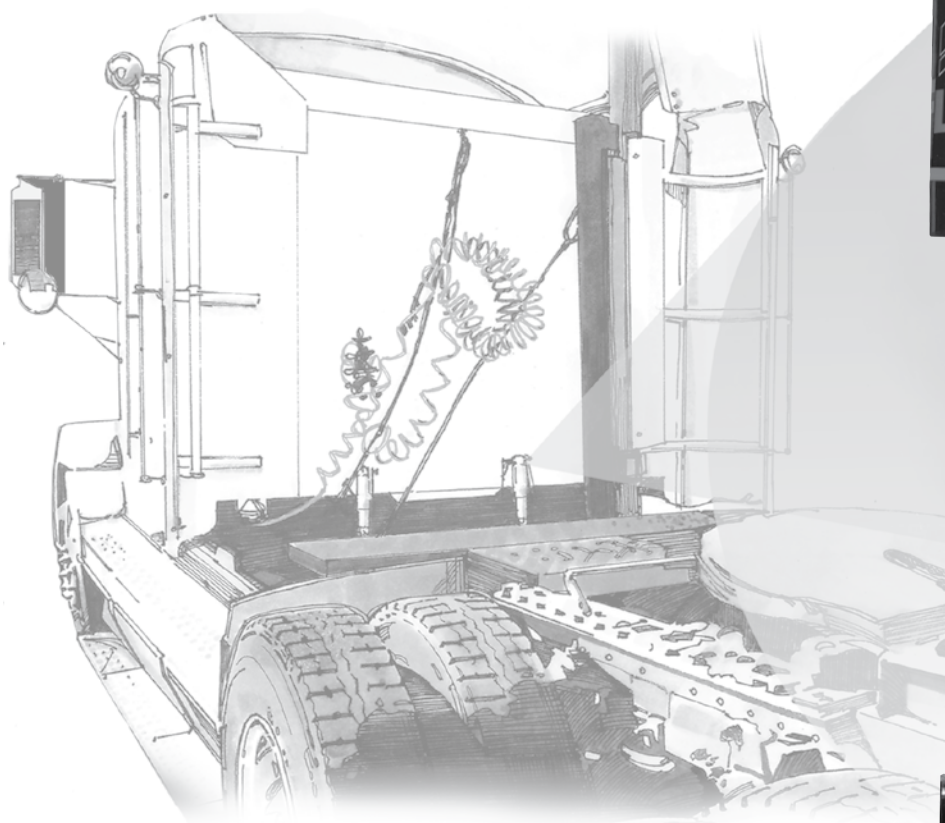

Designed specifically to eliminate cab vibration!
"See pages 14 - 18 for specific applications listing."

- Unique GAS CELL² design reduces fade
- Exclusive 10 stage valving provides consistent control at all speeds
- Premium chrome plated piston rod designed for corrosion resistance and reduced rod seal wear
- Multi-lip nitrile piston rod seal for increased durability
- All weather shock fluid keeps shock functioning normally in extreme temperatures

¹ For truck applications only

² Where design permits

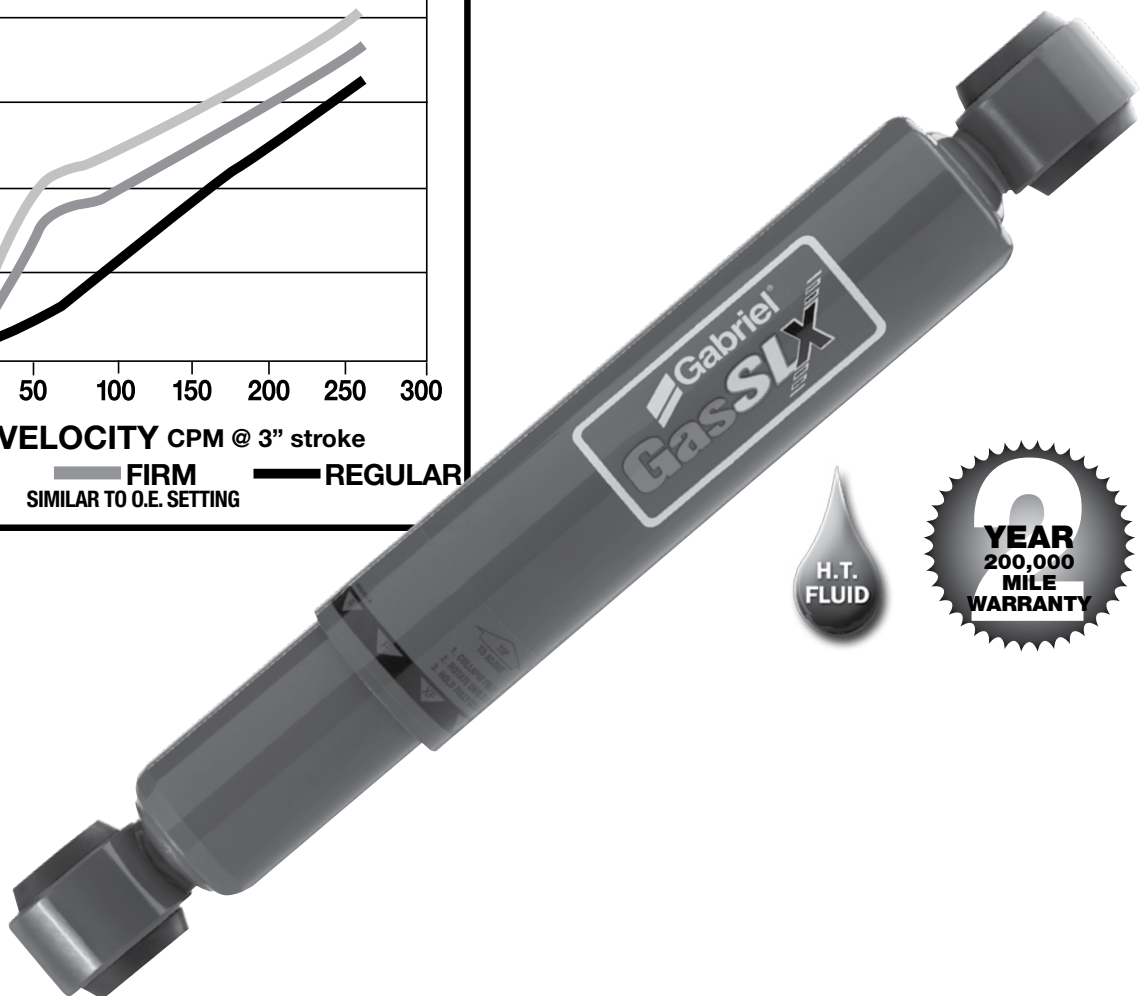

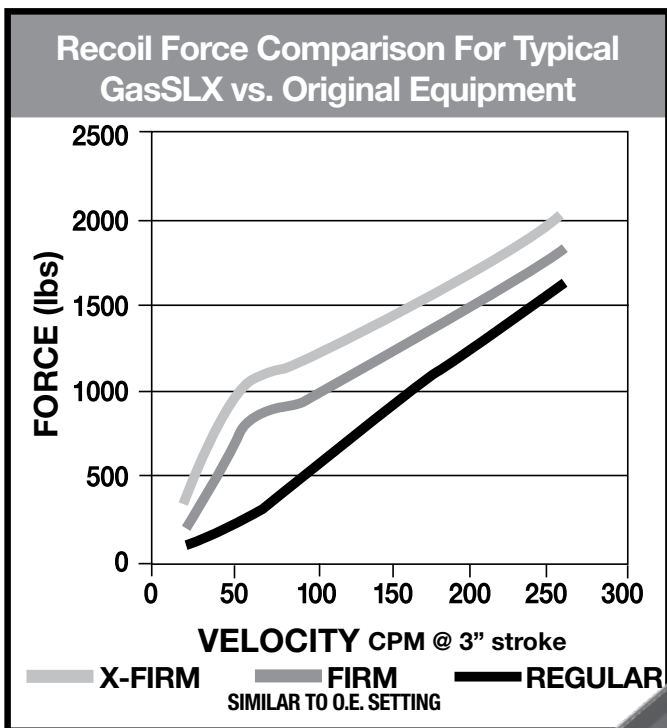

Gabriel®

TRUCK, TRAILER & BUS SHOCKS

GasSLX – The ultimate "SLXtion" in ride!

- The three position GasSLX adjustable shock allows you to choose from one of 3 settings; "Firm", "Regular" and "Extra Firm."
- Firm - closest to OE ride performance
- Regular - a softer ride than that of the OE shock
- Extra firm - more controlled ride

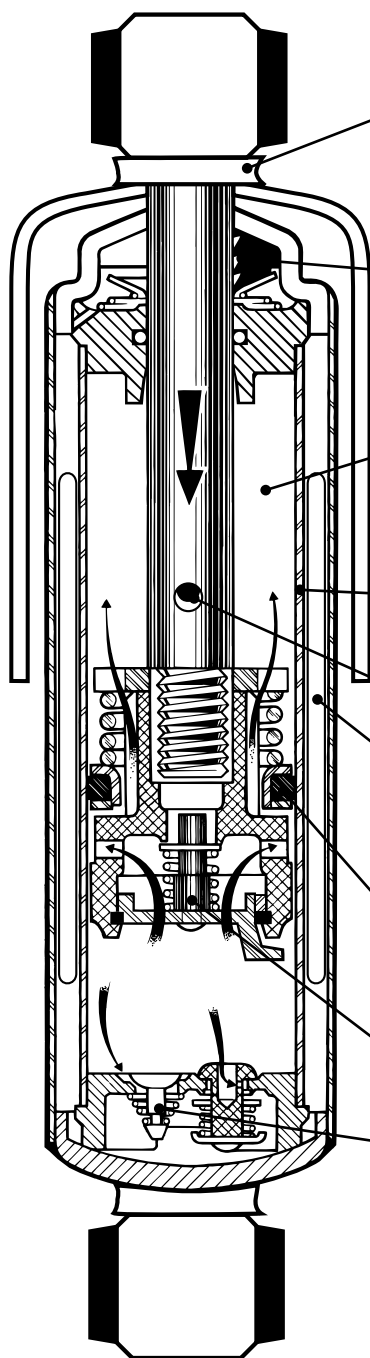

Gabriel®

TRUCK, TRAILER & BUS SHOCKS

GasSLX – This shock provides reliability, control, comfort and ride selection

We believe a premium upgrade is more than just a promise, it's a commitment to deliver. The Gabriel GasSLX was engineered using proven premium components that deliver distinguishable benefits.

360° ARC WELDED END MOUNTS
Protects Against End Mount Breakage.

Today's suspensions require shocks to withstand multi-directional flexing. Reinforcing the weld 360°, ensures structural superiority.

Improved Tensile Strength.

Gives the added strength required to limit travel on air suspensions.

MULTI-LIP VITON SEAL

A More Robust Seal Design for Greater Fluid Retention and High Temperature Performance.

Multi-sealing lips act as backup to keep fluid in.

HIGH TEMPERATURE (HT) FLUID

Reduces Friction and Wear in Extreme Operating Conditions.

Extreme pressures and temperatures can break down standard shock absorber fluids. The Gabriel HT Fluid is uniquely formulated to maintain its lubricating properties at pressures and temperatures 2 to 3 times greater than standard shock fluids.

H.T.
FLUID

LARGE BORE DESIGN

1-5/8" Bore. Proven OEM Design.

The optimum working area when combined with our HT fluid, provides performance and durability you can count on.

HYDRAULIC REBOUND STOP¹

Prevents Impact Damage to the Shock and Vehicle Mounting Components.

At full extension, the restriction hole in the rod is closed off and traps fluid between the piston and upper cylinder head, creating a hydraulic cushion.

GAS CELL

Double Seals Sulfur Hexafluoride (SF₆) Gas to Ensure that it Remains Within the Shock.

The gas cell separates the gas from the fluid so they cannot mix, keeping the fluid free of the bubbles that can cause fade.

PRESSURIZED METAL PISTON RING

Hydraulically Energized to Maintain the Required Damping Characteristics.

As the ring wears, the hydraulic pressure forces the ring out to the tube to maintain the seal and damping characteristics.

10 STAGE VALVING

Improves Handling While Maintaining Ride Comfort.

Allows for the independent adjustment of damping.

¹ Where required by design

Gabriel®

TRUCK, TRAILER & BUS SHOCKS

FleetLine

Top quality components ensure top performance throughout the life of the shock absorber, meaning less wear and tear on other costly suspension parts.

Cold Formed, 360° Arc Welded Mounts*

- Greater tensile strength
- Greatly reduces end mount failures

Multi Lip Seal

- Extra seal protection = Improved fluid retention
- Improved fluid retention = Longer shock life

1-5/8", Large Bore Design*

- Increased tensile strength
- Designed for more control
- Proven design for low friction suspensions

Bulged Design**

- Increased fluid capacity
- Lower operating temperatures
- Less internal wear due to heat dissipation

Hydraulic Extension Stop¹

- Prevents shocks from topping out and suspensions from over-extending
- Designed for low friction suspensions such as Air Spring Suspensions, etc.

Floating Piston Seal Design

- Reduces force-velocity variabilities
- Increase control capabilities at low velocities
- Self-compensates for wear
- Reduced wear between the cylinder and the piston seal means reduced clearance which means less fade
- Less fade means more consistent performance over the full range

10 Stage All Coil Spring Valving

- For comfort and control
- Enhanced durability
- Self cleaning

¹ Where required by design

* Excluding 83000 Series

** Including 85300 and 85700 Series

Note: Features may vary by part number.

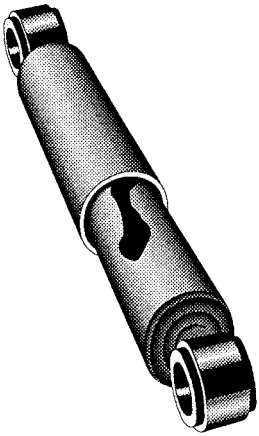

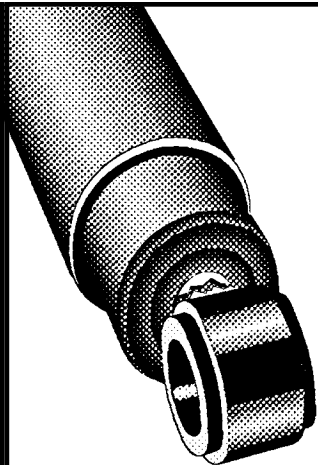

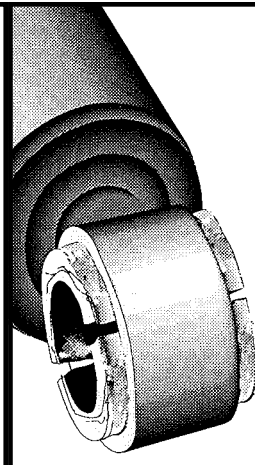

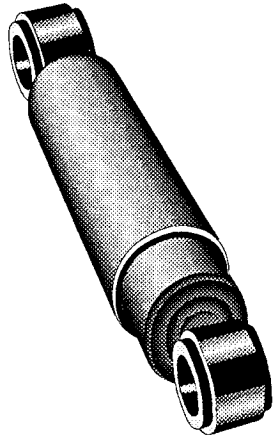

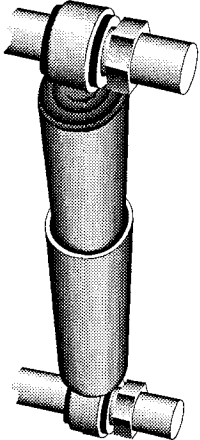

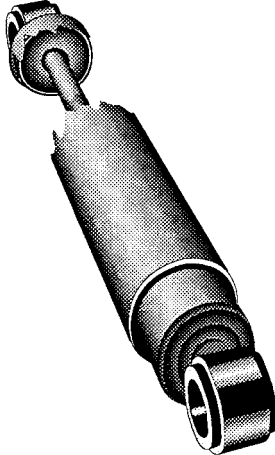

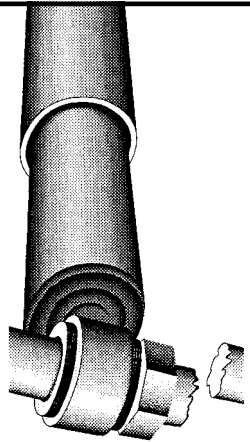

Gabriel®

TRUCK, TRAILER & BUS SHOCKS

When Should Shock Absorbers Be Changed?

All of the following conditions indicate that it is time to replace your shock absorbers. Remember worn shock absorbers can cause vibration that leads to electrical, frame, and/or engine damage. Regular inspection of shock absorbers can prolong the life of your vehicle.

			
<p>L Leaking (Be sure to wipe shock of road grime)</p>	<p>UMB/LMB Upper or lower mount broken</p>	<p>UBB/LBB Upper or lower bushing broken</p>	<p>BI/S Broken internally Seized (Jammed in collapsed position)</p>
	<p>• Soft undulating ride • Nose diving • Too rough</p> 		
<p>II Improper Installation (for example: this shock is upside down)</p>	<p>RC Ride Complaint</p>	<p>DT Dust Tube Broken</p>	<p>TMF Truck Mount Failure</p>

Gabriel®

TRUCK, TRAILER & BUS SHOCKS

Guide to Inspecting Truck Shocks

Regularly scheduled shock maintenance doesn't cost in the long run - it saves.

Like most other chassis components, a program of regular scheduled maintenance for shock absorbers will help to avoid unscheduled down time and reduce overall maintenance costs.

The role of a shock has changed dramatically. Previously, suspensions had heavy multi-leaf springs with limited travel and a great deal of inherent friction. These suspensions quickly self dampened and therefore limited the amount of work the shock needed to perform.

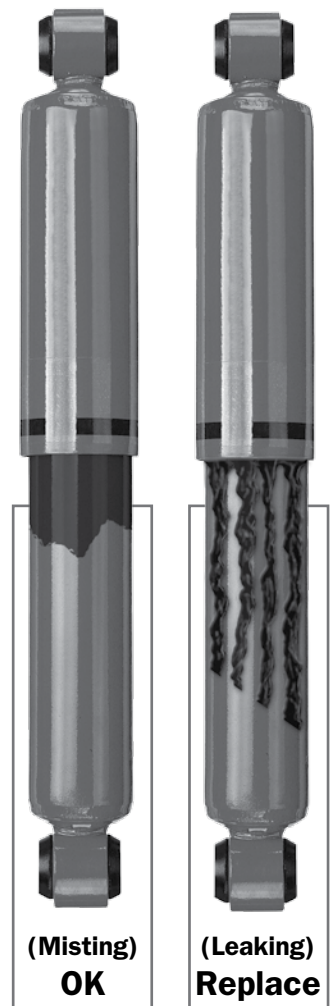

Low friction suspensions such as Air and Taper Leaf have dramatically changed the shock's role. Shocks now play a critical role in dampening suspension oscillation. Properly functioning shocks can help reduce the wear of more expensive suspension components such as air bags, while assisting in the reduction of tire wear and vibration damage to the cab and chassis. They also aid in reducing driver fatigue. Worn shocks simply cannot assist in providing control over today's sophisticated suspension systems.

Leaking vs. Misting Shocks

Misting shocks are often mis-diagnosed as failures. Misting is the process whereby very small amounts of shock fluid evaporate at high operating temperatures through the upper seal of the shock. When the "mist" reaches the cooler outside air, it condenses and forms a film on the outside of the shock body. When mixed with road debris and dust, a grime will often coat the entire body of the shock. Misting is a perfectly normal and necessary function of the shock. The fluid which evaporates through the seal area helps to lubricate & prolong the life of the seal.

Many technicians find it difficult to differentiate between a misting shock and a true leaker which needs to be replaced. A leaker will show clear signs of fluid leaking in streams from the upper seal. These streams can most easily be seen when the shock is fully extended, and one inspects as far up the main body of the shock (underneath the dust cover or tube) as possible.

Inspect with shocks fully extended

When should shocks be replaced?

There are many tell tale signs that indicate it may be time to replace shocks. Inspect for:

- **Uneven Tire Wear** - Balance should be checked first
- **Ride Deterioration**
- **Excess Vibration**
- **Sagging Taper Leaf Springs** - This is not caused by weak shocks
- **Premature wear** on cab, electrical, and cooling system components
- **Broken or Torn Air Springs** - Shocks will only affect this if they are broken or are missing

Gabriel®

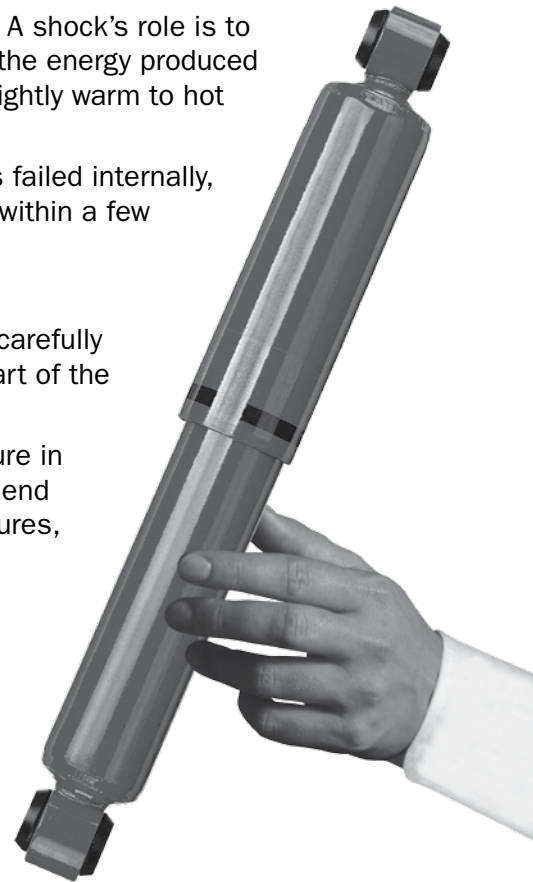

TRUCK, TRAILER & BUS SHOCKS

Take the Heat Test

Shock absorbers function at temperatures ranging from ambient to 350°F. A shock's role is to dampen the oscillation of the truck's springs. It does this by transforming the energy produced by the spring to heat and dissipating it. As a result the shock should be slightly warm to hot to the touch after normal use.

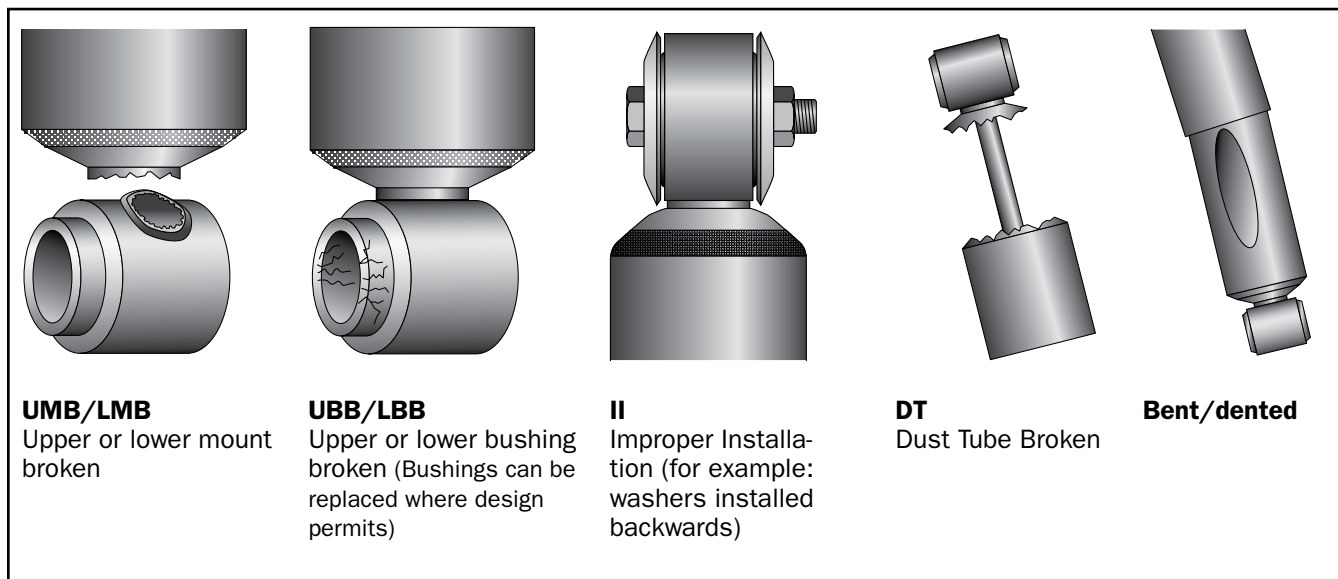

If ride deterioration is experienced and there is suspicion that a shock has failed internally, which is visually undetectable, perform the following "SHOCK HEAT TEST" within a few minutes of operating the equipment:

1. Drive the vehicle at moderate speeds for at least 15 minutes.
2. Within a few minutes of driving the vehicle, touch each shock absorber carefully on its body below the dust cover or tube, after first touching a nearby part of the chassis to establish a reference ambient temperature of the metal.
3. All shock absorbers should be warmer than the chassis. Suspect a failure in any shock absorber that is noticeably cooler than its mate on the other end of the axle. Different temperatures from axle to axle do not indicate failures, but cooler temperatures on any one axle does warrant removal and examination of the cooler shock absorber.
4. To inspect for an internal failure, remove and shake the suspected shock. Listen for the sound of metal parts rattling inside. Rattling of metal parts can indicate that the shock has an internal failure.

Shock Visual Checks

Look for these potential problems

Gabriel®

TRUCK, TRAILER & BUS SHOCKS

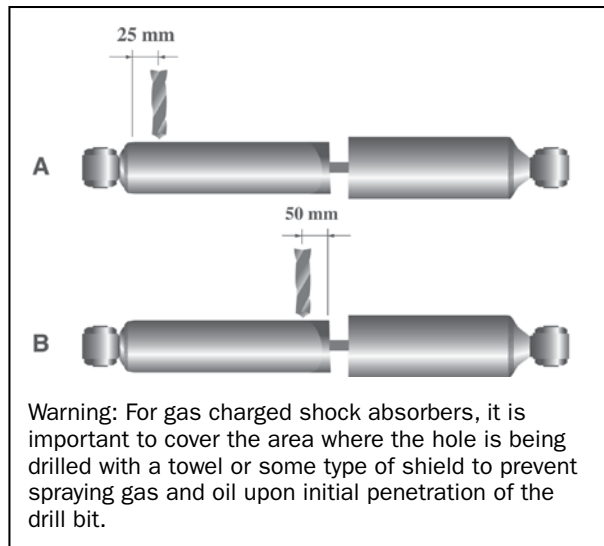

Disposal Instruction

General Remark

Appropriate protective measures, such as wearing safety glasses and protective gloves, should be taken when removing oil and gas from discarded and defective shock absorbers.

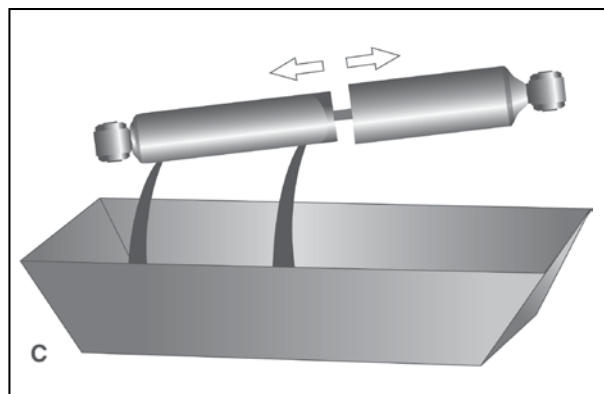

Procedure

1. Secure the shock absorber in a horizontal position.
2. Fully extend the piston rod prior to drilling the unit.
3. Using a 1/8" (3mm) drill bit, drill a hole in a downward direction approximately 1.0" (25 mm) from the bottom of the shock absorber to a depth of about 1.0" (25 mm) (see fig. A).
4. Drill a second hole of about 1/8" (3 mm) at 2.0" (50 mm) from the top of the shock absorber to depth of about 1.0" (25 mm), in order to allow all of the oil to flow out (see fig. B).
5. By moving the piston rod in and out, begin stroking the unit to completely purge the oil from the cylinder of the unit (see fig. C).

Environmental Information

6. Collect all used oil, **being careful not to mix oil with any other waste or refuse**. Store the used oil in an approved container clearly marked "Used Oil".
7. Dispose of the remaining shock body and internal parts in accordance with your local State or Provincial legislation concerning waste oil and other wastes.
8. Store, dispose, and/or transport used oil in accordance with environmental regulations and used oil program regulations in your state or province.

Used shock oil may be disposed in the container used for recycling engine oils. Information on where to dispose of the oil and other parts can be obtained from environmental authorities or oil suppliers.

Gabriel[®]

TRUCK, TRAILER & BUS SHOCKS

Warranty Policy on Gabriel Shock Absorbers (Heavy Truck Program)

Commercial Warranty

Gabriel Shock Absorbers are warranted as follows:

GasSLX Shock Absorbers (89000 Series) against manufacturing defects for two years from date of purchase or for 200,000 miles (322,000 km) whichever occurs first.

FleetLine Shock Absorbers (83000, 85000, 85300, 85700, 85900 and 87000 Series) against manufacturing defects for one year from date of purchase, unlimited mileage.

THIS COMMERCIAL WARRANTY IS LIMITED TO THE REPLACEMENT OF THE DEFECTIVE PRODUCT ONLY. Cost of shipping, removal and installation is not included. This warranty applies to the original purchaser under normal operating conditions.

The provisions of this warranty shall not apply to product: (a) installed on any vehicle(s) registered or used for racing, or competitive purposes; (b) used for any purpose for which it was not designed; (c) which has been altered or subjected to misuse, negligence or accident; (d) which has been improperly installed.

Non-Commercial Warranty

Gabriel Shock Absorbers are warranted as follows:

Gas Light Truck Shock Absorbers, (G60000 Series) against manufacturing defects for one year from date of purchase or for 25,000 miles (40,250 km) whichever occurs first. This warranty applies to the original purchaser, for use on private passenger light trucks and vans only, under normal operating conditions.

THIS WARRANTY IS LIMITED TO THE REPLACEMENT OF THE DEFECTIVE PRODUCT ONLY. Cost of shipping, removal and installation is not included.

The provisions of this warranty shall not apply to product: (a) installed on any vehicle(s) registered or used for commercial, racing, or competitive purposes; (b) used for any purpose for which it was not designed; (c) which has been altered or subjected to misuse, negligence or accident, (d) which has been improperly installed.

HOW TO DETERMINE THE CORRECT SHOCK FOR YOUR TRUCK

COMO ESCOGER EL MEJOR AMORTIGUADOR PARA SU CAMIÓN

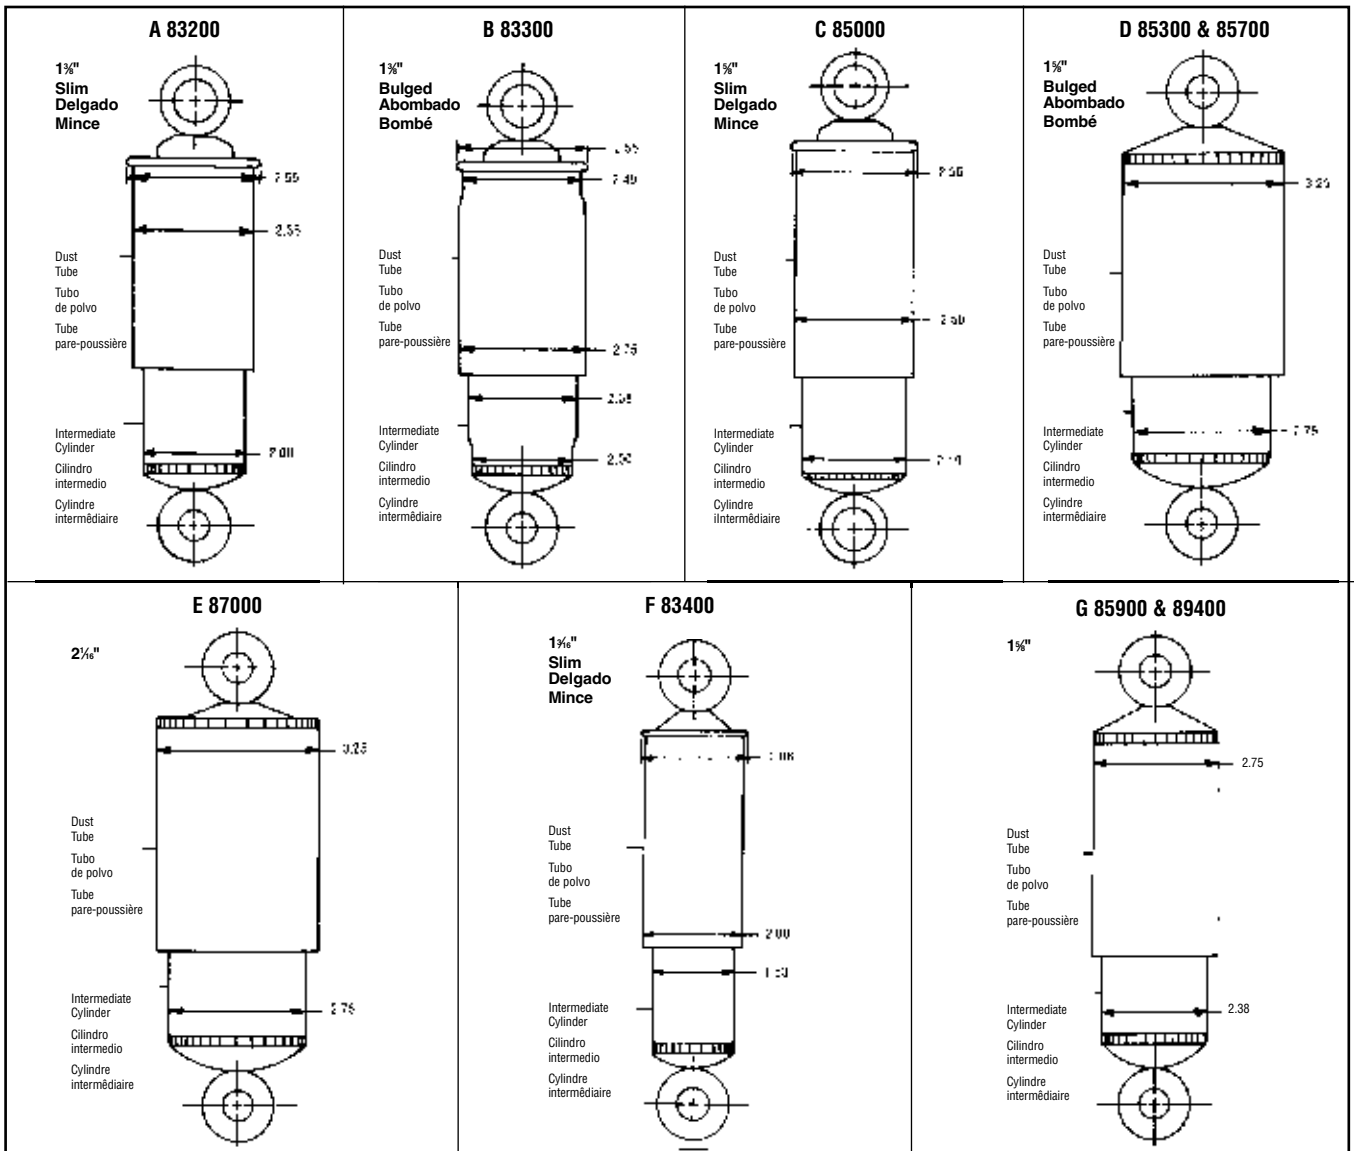

COMMENT CHOISIR LE BON AMORTISSEUR POUR VOTRE CAMION.

STEP 1: Measure the diameter of the dust tube and cylinder to determine the series.

1ER PASO Mida el diámetro del tubo de polvo y del cilindro para determinar la serie.

1RE ÉTAPE Mesurez le diamètre du tube de poussière et du cylindre pour déterminer la série.

EXTERNAL DIMENSIONS DIMENSIONES EXTERNAS DIMENSIONS EXTÉRIEURES

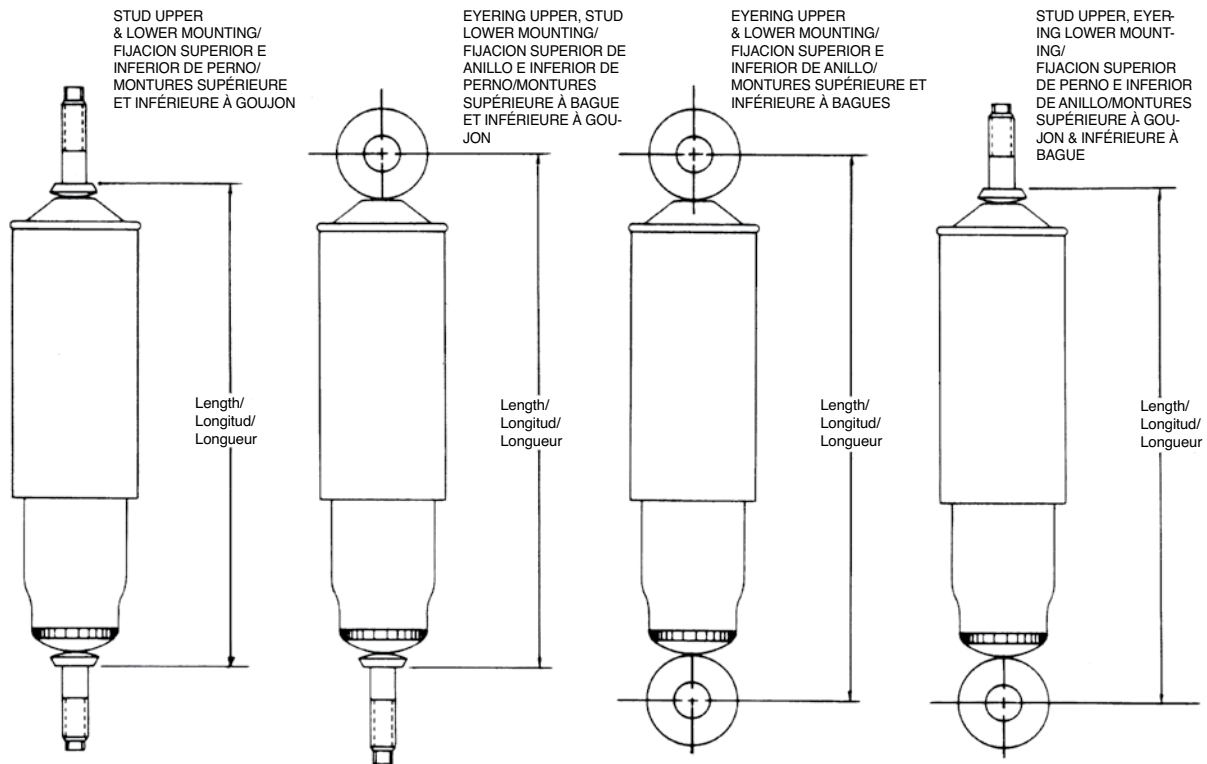

STEP 2: Identify the mounting style. Measure fully extended and fully collapsed lengths at the locations indicated for mounting style.

2° PASO Identifique el método de fijación. Mida la extensión máxima y la compresión máxima en los lugares indicados para la fijación.

2^E ÉTAPE Identifiez la méthode de fixation. Mesurez la longueur en pleine extension et en pleine compression, aux endroits indiqués pour la méthode de fixation.

HOW TO MEASURE EXTENDED & COLLAPSED LENGTHS OF SHOCK ABSORBERS COMO MEDIR LAS LONGITUDES EXTENDIDA Y COMPRIMIDA DE LOS AMORTIGUADORES COMMENT MESURER LES LONGUEURS ALLONGÉ ET COMPRIMÉ DES AMORTISSEURS

INSTRUCTIONS:

- Using the proper measuring points as shown above find the nearest replacement shock absorber from the listing by increments of extended length.
- Identify the proper mounting from the mounting codes and match these requirements by carefully measuring the mounting dimensions (top and bottom) of the shock absorber to be replaced.
- Carefully take note of the following requirements:
 - Dust tubes** - This requirement should be noted in comparison with the shock absorber to be replaced. Shock absorber environment in its application makes this requirement necessary for piston rod protection and extended shock absorber life.
 - Recoil Cutoff and Compression Bumper** - Carefully note these specifications - deviation of length requirements should not exceed $\pm \frac{1}{8}$ ". These shock absorber designs are footnoted for easy identification.

Note: Shock Absorbers used for installations other than those recommended in our catalog are **not subject to warranty**.

INSTRUCCIONES :

- Usando los puntos de medida adecuados como mencionado, encuentre el amortiguador más cercano en la lista por incrementos de la longitud extendida.
- Identifique la fijación adecuada por medio de los códigos de fijación y compare estas especificaciones, midiendo cuidadosamente las dimensiones de la fijación (superior e inferior) del amortiguador por reemplazar.
- Note cuidadosamente las exigencias siguientes :
 - Guarda polvo** : esta exigencia debe notarse en comparación con el amortiguador por reemplazar. Esta exigencia es necesaria en cuanto a los amortiguadores para proteger al vástago del pistón y extender la duración del amortiguador.
 - Topo de retorno y topo de compresión**. Note cuidadosamente las especificaciones siguientes : las exigencias de longitud no deben de ser excedidas $\pm \frac{1}{8}$ ". Estos diseños de amortiguadores están marcados para facilitar su identificación.

Nota : Los amortiguadores usados para instalaciones otras que las recomendadas en nuestro catálogo **no son garantizados**.

INSTRUCTIONS:

- En utilisant les points de mesure appropriés comme indiqués ci-dessus, trouvez l'amortisseur de rechange le plus près de cette mesure d'après la longueur allongée.
- Repérez les montures appropriées sur les codes des montures et faites correspondre ces exigences en mesurant attentivement les dimensions des montures (haut et bas) de l'amortisseur à replacer.
- Avec soin, prenez note des exigences suivantes:
 - Tubes pare-poussière** - Cette exigence devrait être notée en comparaison de l'amortisseur à remplacer. Le milieu de service rend cette exigence nécessaire pour la protection de la tige de piston et une meilleure longévité de l'amortisseur.
 - Arrêt de retour et butée de compression** - Notez avec soin ces spécifications. La déviation par rapport aux exigences de longueurs ne doit pas dépasser $\pm \frac{1}{8}$ po. Ces modèles d'amortisseurs portent une note pour une identification facile.

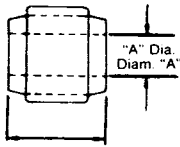

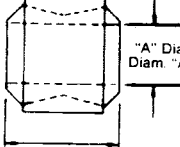

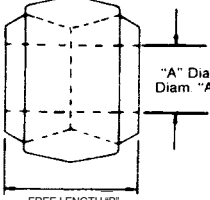

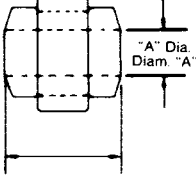

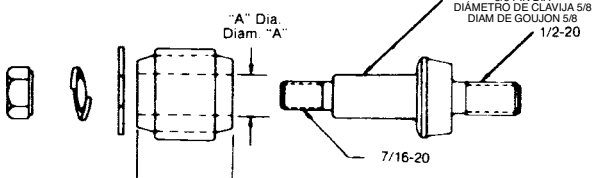

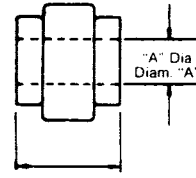

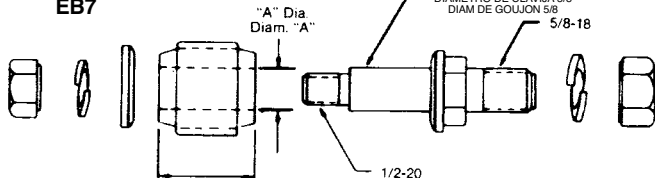

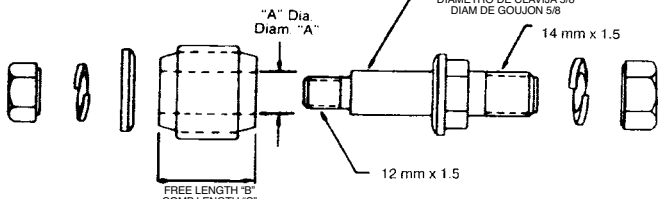

Note: Les amortisseurs utilisés pour des installations autres que celles recommandées dans notre catalogue **ne sont pas couverts par la garantie**.

STEP 3: Measure end mount diameters, widths, and lengths. Refer to the following Endmount tables to determine the appropriate or matching mounting code

3ER PASO Mida las dimensiones del tubo, así como el diámetro, la anchura y la longitud de las fijaciones. Consulte las tablas siguientes de conteras para determinar el código de montaje apropiado o concorde

3E ÉTAPE Mesurez le diamètre, la largeur et la longueur des bagues. Consultez les tableaux d'embouts suivants afin d'établir le code de montage approprié ou concordant

EXPLANATION OF COLUMN HEADINGS EXPLICACION DE LOS TITULOS DE LAS COLUMNA EXPLICATION DES EN-TÊTES DE COLUMNS

SHOCK ABSORBER PART NUMBER:

The catalog number for the individual shock absorber.

Número de parte del amortiguador :

El número de catálogo para el amortiguador individual

Numéro de pièce de l'amortisseur:

Le numéro de catalogue pour l'amortisseur individuel.

EXTENDED LENGTH:*

The length of the shock absorber when it is fully extended. See "How to Measure" instructions.

Longitud extendida :

La longitud del amortiguador cuando es totalmente extendido. Ver instrucciones «Cómo medir»

Longueur étirée:*

La longueur de l'amortisseur entièrement étiré. Voir "Comment mesurer".

COLLAPSED LENGTH:*

The length of the shock absorber when it is fully compressed. See "How to Measure" instructions.

Longitud comprimida :

La longitud del amortiguador cuando es totalmente comprimido. Ver instrucciones «Cómo medir»

Longueur comprimée:*

La longueur de l'amortisseur entièrement comprimé. Voir "Comment mesurer".

STROKE:

This is the approximate length of the stroke of the individual shock absorber being described.

Carrera :

Es la longitud aproximada de la carrera del amortiguador descrito

Course:

C'est la longueur approximative de la course de l'amortisseur individuel décrit.

MOUNTING CODES:

Indicates the type of mounting ends for the upper and lower end of each shock absorber.

They are listed as follows:

- Stud Type Mounts ("S" & "DS")
- Eye Ring and Bushing Mounts ("EB")
- Eye Ring and Bushing with Sleeve Mounts ("ES")
- Eye Ring and Bushing with Bar Pin Mounts ("BP")
- Special Mounting Codes ("SP")

Códigos de fijación :

Indica el tipo de montantes de fijación superior e inferior para cada amortiguador.

Se listan como sigue :

- Fijaciones de tipo perno («S» y «DS»)
- Fijaciones de anillo y buje («EB»)
- Fijaciones de anillo y buje con camisa («ES»)
- Fijaciones de anillo y buje con clavija («BP»)
- Códigos de fijación especiales («SP»)

Codes de montage:

Indique le type de montures supérieure et inférieure de chaque amortisseur.

Ils sont énumérés comme suit:

- Montures de type goujon ("S" & "DS")
- Montures à bague et manchon ("EB")
- Montures à bague et manchon avec collet ("ES")
- Montures à bague et manchon avec goupille ("BP")
- Codes de montures spéciales ("SP")

DUST TUBE:

Indicates whether the shock absorber is supplied with a dust tube.

Tubo de polvo :

Indica si el amortiguador está provisto con un tubo de polvo.

Tube pare-poussière:

Indique que l'amortisseur est fourni avec un tube pare-poussière.

MOUNTING ACCESSORY PACKAGE NUMBER:

The part number of the Mount Accessory Package supplied with the shock absorber.

Número de paquete de accesorios de fijación :

El número de parte del paquete de accesorios de fijación provisto con el amortiguador

Numéro d'emballage d'accessoires de montage:

Le numéro de pièce de l'emballage d'accessoires de montage fourni avec l'amortisseur.

*NOTE:

All dimensions shown are in inches

*NOTA :

Todas las dimensiones son en pulgadas

*NOTE:

Toutes les dimensions indiquées sont en pouces

STEP 4: Refer to shock absorber specifications by end mount. Start first by finding the appropriate series. Next, match the extended/collapsed length and find the correct mounting codes. Refer to the far left column of the chart for the correct Gabriel Shock Absorber part number.

4º PASO

Consulte las especificaciones del amortiguador mostradas al final del catálogo. Encuentre primero la serie adecuada. Luego, compare las longitudes de extensión y de compresión, y encuentre los códigos de fijación correctos. Consulte la columna del extremo izquierdo de la tabla para identificar el número de parte del amortiguador Gabriel correcto.

4^E ÉTAPE

Reportez-vous aux spécifications d'amortisseur énoncées à la fin du catalogue. Trouvez d'abord la série appropriée. Comparez ensuite les longueurs d'extension et de compression et trouvez les bons codes de fixation. Reportez-vous à la colonne située à l'extrême gauche du tableau pour identifier le bon numéro de pièce pour un amortisseur Gabriel.

SPECIFICATIONS BY END MOUNT

★ Will be available in first quarter of 2011.

* Damping force, in pounds, to either extend or collapse the shock absorber at an average operating velocity. Fuerza de amortiguación en libras para extender o comprimir el amortiguador a una velocidad de operación promedio. La puissance d'amortissement en poids de l'amortisseur, soit comprimé, doit détendu, à une vitesse de fonctionnement moyenne.

‡ For GasSLX Series, forces are at the "Firm" (F) setting. / Para la serie Gas SLX, las fuerzas estan ajustada en (F) "Firme". / Pour la série GasSLX, le réglage de la force est sur « Ferme » (F).

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

Evolución hacia Amortiguadores de Desempeño Superior

Las demandas de desempeño cada vez más estrictas de los vehículos de hoy en día exigen amortiguadores que estén a la altura de tales desafíos.

Las suspensiones pesadas de hoja múltiple son de carrera muy limitada y su nivel de fricción inherente es alto. La suspensión de hoja múltiple amortigua rápidamente la oscilación de la suspensión, limitando la cantidad de trabajo que deben realizar los amortiguadores.

Las suspensiones de baja fricción de hoy en día, como las de Muelles Neumáticos y de Muelles Ahusados, están diseñadas para presentar muy escasa fricción de amortiguación de la suspensión y abundante carrera vertical. Estas características mejoran el control operativo y el desempeño de los vehículos actuales. Además, contribuyen a reducir la fatiga física para el conductor al aislar el equipo y su carga del daño generado por la vibración de la carretera.

En general, las suspensiones de baja fricción han aumentado la necesidad de controlar la oscilación de la suspensión, con lo cual, la importancia de que los amortiguadores sean de alto desempeño cobra cada vez mayor importancia.

Suspensión de Hoja Múltiple

La fricción inherente de amortiguación limita la carrera de la suspensión de 2 a 3".

Suspensión de Muelles Neumáticos

Suspensión de Hoja Ahusada

La carga de amortiguación ha sido desplazada a los amortiguadores. Estas suspensiones pueden tener una carrera de más de 9".

Gabriel®

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

GasSLX (Amortiguadores de Gas Ajustables para Camiones Pesados)

Serie 89000

Nuestros amortiguadores de gas ajustables premium para Camiones Pesados.

- Distintivo doble sello de Célula de Gas para máxima retención de gas
- Ajustable en tres posiciones, permite seleccionar el tipo de marcha en forma personalizada
- Su diámetro interior de 1-5/8", sus soportes de 360° soldados por arco en los extremos ofrecen mayor durabilidad
- Su fluido de Alta Temperatura especialmente formulado reduce la fricción y el desgaste en condiciones de operación extremas
- Muchas mejoras de componentes premium adicionales se combinan para ofrecer el máximo nivel de desempeño y durabilidad

FleetLine (Amortiguadores para Camiones Pesados)

Serie 83000*

Un producto para trabajo pesado, especialmente apto para camionetas o suspensiones de camiones pesados donde la distancia libre disponible es limitada.

- Diámetro interior de 1-3/8"
- Válvulas de 10 etapas

Serie 85000/85300*

Su mayor durabilidad hace de estas dos series el producto estándar de trabajo pesado para las suspensiones de baja fricción de la actualidad.

- Diámetro interior de 1-5/8" para mayor durabilidad
- Soportes de 360° soldados por arco en los extremos protegen contra ruptura del soporte en los extremos
- Tope de rebote hidráulico¹ evita que sufran daños el amortiguador y los componentes de montaje del vehículo
- Sello de vástago de pistón de labio múltiple que ofrece protección de resguardo para el sello
- Cierre soldado para máxima resistencia a la tracción

Serie 85700*

Diseñada para aplicaciones especiales en camiones y para aplicaciones de trabajo severo en autobuses. Las características especiales de esta serie aseguran una vida útil constante y prolongada.

- Su diámetro interior de 1-5/8" con diseño abultado ofrece mayor capacidad de fluido para una operación a más bajas temperaturas
- Su material de sello de vástago patentado aumenta notablemente la vida útil del sello
- Su Fluido de Alta Temperatura especialmente mezclado reduce la fricción y el desgaste en condiciones de operación extremas
- Además, todas las características especializadas propias de las Series 85000 y 85300

* Su sello de pistón autocompensante ofrece una amortiguación constante a lo largo de toda la vida útil del amortiguador

¹ Si es necesario

Gabriel®

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

Amortiguadores FleetLine para Cabinas

Amortiguadores para Cabinas

Diseñados específicamente para eliminar la vibración en la cabina.

- Sus diámetros interiores de 1", 1-3/16", 1-3/8", 1-5/8" ofrecen suspensión personalizada para diferentes diseños de cabinas
- Su diseño exclusivo de Celda de Gas³ reduce el desvanecimiento gracias a la aeración del fluido
- Sus exclusivas válvulas de 10 etapas ofrecen una marcha constante a cualquier velocidad
- Vástago de pistón cromado premium, resistente a la corrosión y que reduce el desgaste del sello del vástago
- Sello de vástago de pistón de labio múltiple ofrece protección de resguardo para el sello y mayor durabilidad

1
AÑO
DE GARANTÍA
SIN LÍMITE
DE MILLAS

De Gas para Camionetas

Serie G6000

Para un desempeño constante y confiable.

Diseñado para aplicaciones estándar en camionetas y vans.

- Diámetro interior de 1-3/8"
- Amortiguadores de gas
- Sello de vástago de pistón y de labio radial
- Sólo aplicaciones no comerciales

1
AÑO
25,000 MILLAS
DE GARANTÍA

Estabilizadores de Dirección

- Soportes reforzados, soldados por arco en los extremos, protegen contra ruptura del soporte en los extremos y ofrecen mayor durabilidad
- Su exclusivo diseño de Celda de Gas separa el aire y el aceite para que el amortiguador funcione correctamente en la posición horizontal
- Soportes diseñados especialmente (estilo equipo original) para mejor acoplamiento y mayor durabilidad

Amortiguadores diseñados con el mismo enfoque de calidad, diseño, longevidad y resistencia que ha venido a caracterizar a nuestros amortiguadores de Equipo Original de renombre mundial.

³ Si el diseño lo permite

Gabriel®

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

Amortiguadores FleetLine para Cabinas¹

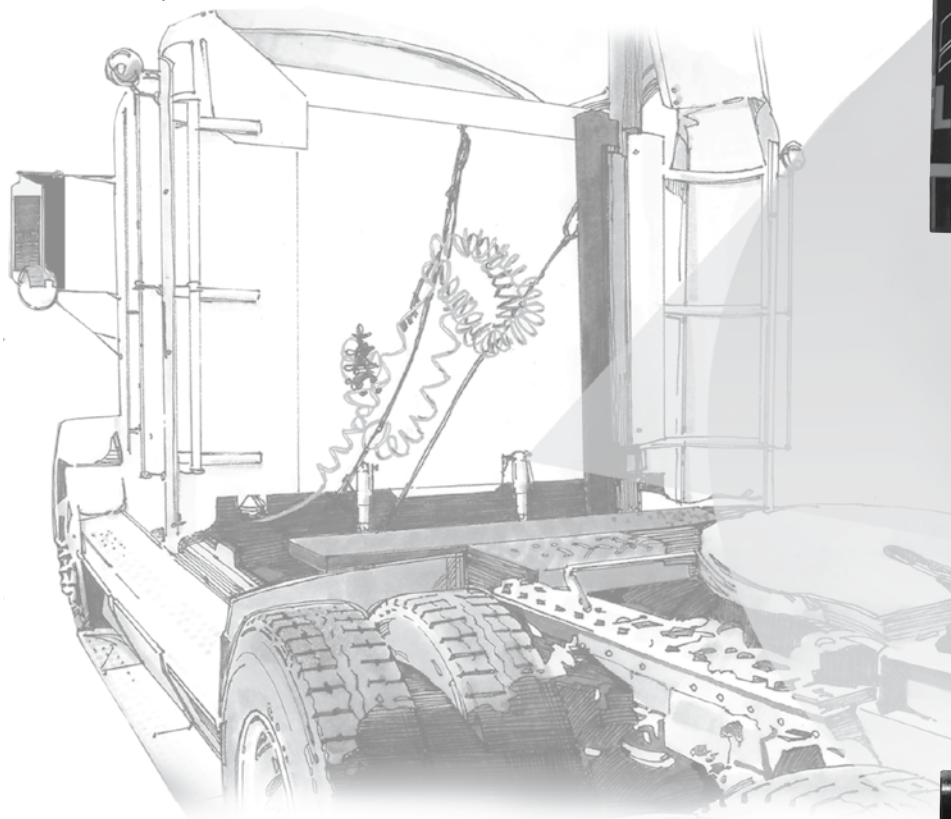

Diseñados específicamente para eliminar la vibración en la cabina.
"Ver la lista de aplicaciones específicas en las páginas 14 a 18".

- Su exclusivo diseño de CELDA DE GAS² reduce el desvanecimiento
- Sus exclusivas válvulas de 10 etapas ofrecen un control constante a cualquier velocidad
- Vástago de pistón cromado premium, resistente a la corrosión y que reduce el desgaste del sello del vástago
- Sello de vástago de pistón de labio múltiple de goma de nitrilo para mayor durabilidad
- El fluido de amortiguador para todo clima mantiene al amortiguador funcionando normalmente a temperaturas extremas

¹ Sólo para aplicaciones en camiones

² Si el diseño lo permite

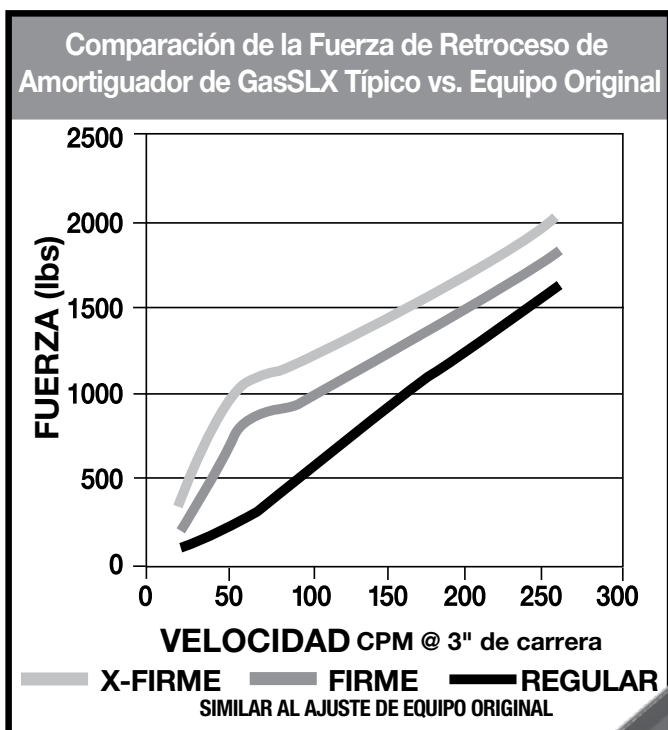

Gabriel®

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

GasSLX – ¡Lo máximo en "SLXción" de marcha!

- Los amortiguadores ajustables de tres posiciones GasSLX le permiten seleccionar una de 3 posiciones – Firme, Regular y Extrafirme.
- Firme – la más cercana al desempeño de marcha de equipo original
- Regular – una marcha más suave que la de un amortiguador de equipo original
- Extra firme – marcha más controlada

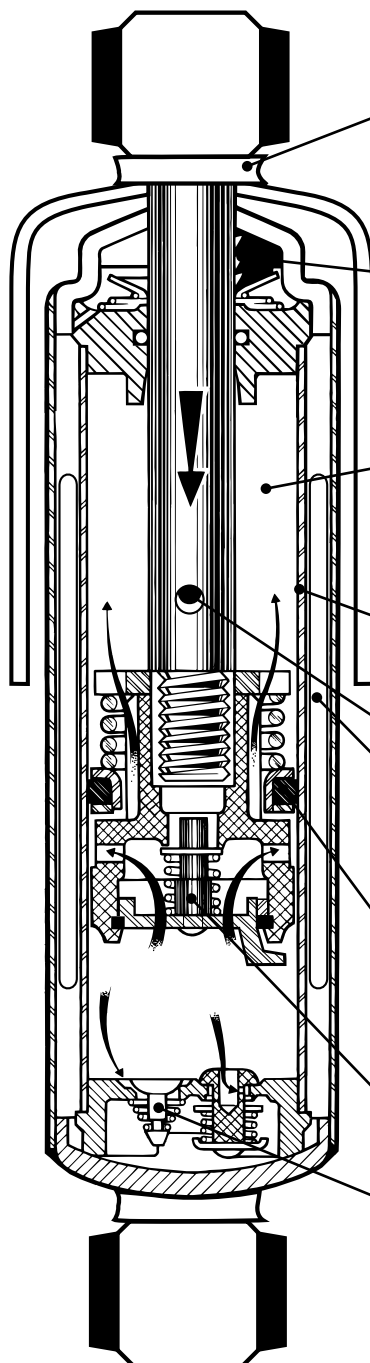

Gabriel®

AMORTIGUADORES PARA CAMIONES, SEMIRREMOLQUES Y AUTOBUSES

GasSLX – Amortiguador que ofrece confiabilidad, control, comodidad y selección de marcha

Creemos que una mejora premium, más que una promesa, es un compromiso que hay que cumplir. El amortiguador Gabriel GasSLX fue diseñado con componentes premium de eficacia comprobada para ofrecer beneficios notables.

SOPORTES DE 360° CON SOLDADURA DE ARCO EN LOS EXTREMOS
Protegen Contra Rupturas del Soporte en los Extremos.

Las suspensiones de hoy en día requieren amortiguadores capaces de resistir el flexionamiento multidireccional. Reforzando la soldadura en 360° se asegura una superioridad estructural.

Resistencia a la Tracción Mejorada.

Confiere resistencia adicional para limitar la carrera en suspensiones neumáticas.

SELLO DE VITON DE LABIOS MÚLTIPLES

Diseño Más Robusto para Mayor Retención de Fluidos y Desempeño a Alta temperatura.

Sus labios de sellado múltiple actúan como respaldo para mantener el fluido en el interior.

FLUIDO DE ALTA TEMPERATURA (HT)

Reduce la Fricción y el Desgaste en Condiciones de Operación Extremas.

Las presiones y temperaturas extremas pueden causar la desintegración de los fluidos estándar para amortiguadores. El fluido HT Gabriel está especialmente formulado para mantener sus propiedades lubricantes a presiones y temperaturas de 2 a 3 veces superiores a las de los fluidos estándar para amortiguadores.

DISEÑO DE DIÁMETRO INTERIOR GRANDE

Diámetro interior de 1-5/8". Diseño de Equipo Original de Eficacia Comprobada.

Esta área de trabajo ideal, combinada con nuestro fluido HT, ofrece desempeño y durabilidad confiables.

TOPE DE REBOTE HIDRÁULICO¹

Evita Daños por Impacto al Amortiguador y a los Componentes de Montaje del Vehículo.

Totalmente extendido, el agujero de restricción en el vástago se cierra, atrapando el fluido entre el pistón y la cabeza superior del cilindro, creando así un cojín hidráulico.

CELDA DE GAS

Sella Doblemente el Gas de Hexafluoruro de Azufre (SF6) para Asegurar que Permanezca Dentro del Amortiguador.

La celda de gas separa el gas del fluido para que no se puedan mezclar, manteniendo el fluido libre de burbujas que pudieran causar desvanecimiento.

ANILLO DE PISTÓN METÁLICO PRESURIZADO

Energizado Hidráulicamente para Mantener las Características de Amortiguación Requeridas.

Conforme se va desgastando este anillo, las fuerzas de presión hidráulica van forzando el anillo hacia fuera del tubo para mantener sus características de sellado y amortiguación.

VÁLVULAS DE 10 ETAPAS

Mejora el Manejo y Mantiene la Comodidad de Marcha.

Permite ajustar la amortiguación de manera independiente.

¹ Si se requiere por diseño

Gabriel®

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

FleetLine

Componentes de máxima calidad para asegurar un desempeño superior a lo largo de toda la vida útil del amortiguador, reduciendo el desgaste de otras partes costosas de la suspensión.

Soportes de 360° Moldeados en Frío Soldados por Arco*

- Resistencia a la tracción mejorada
- Reduce considerablemente las fallas de soportes en los extremos

Sello de Labio Múltiple

- Protección con sellos adicionales = Mejor retención de fluido
- Mejor retención de fluido = Vida útil más prolongada del amortiguador

Diseño de Diámetro Interior Grande de 1-5/8"*

- Resistencia a la tracción mejorada
- Diseñado para mayor control
- Diseño de eficacia comprobada para suspensiones de baja fricción

Diseño Abultado**

- Mayor capacidad de fluido
- Temperaturas de operación más bajas
- Menos desgaste interno gracias a su disipación del calor

Tope de Extensión Hidráulico¹

- Evita que los amortiguadores toquen techo y que las suspensiones se sobreextiendan
- Diseñado para suspensiones de baja fricción, tales como las Suspensiones de Muelles Neumáticos, etc.

Diseño de Sello de Pistón Flotante

- Reduce las variabilidades fuerza-velocidad
- Aumenta las capacidades de control a bajas velocidades
- Permite autocompensación por desgaste
- Menor desgaste entre el cilindro y el sello del pistón significa menos espacio libre lo cual, a su vez, se traduce en menos desvanecimiento
- Menos desvanecimiento significa desempeño más constante a lo largo del rango completo

Válvulas de Resortes Totalmente Helicoidales de 10 Etapas

- Para mayor comodidad y control
- Durabilidad más prolongada
- De autolimpieza

¹ Si se requiere por diseño

* Excluyendo la Serie 83000

** Incluyendo las Series 85300 y 85700

Nota: Las características pueden variar según el número de parte.

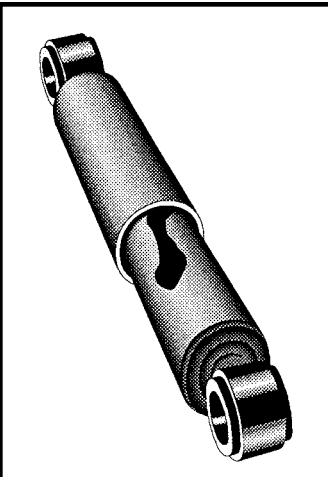

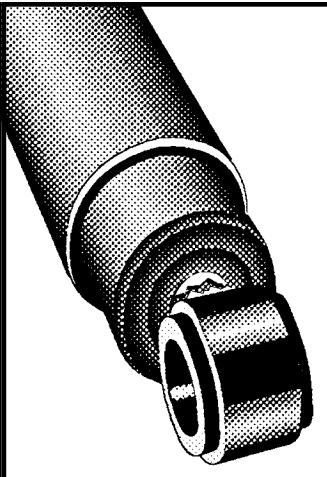

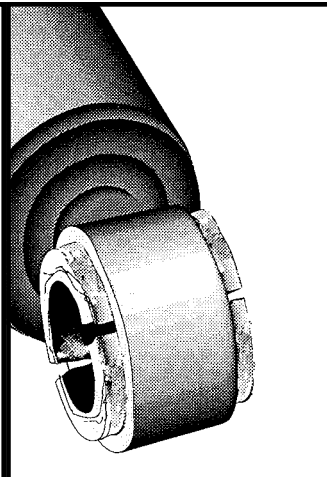

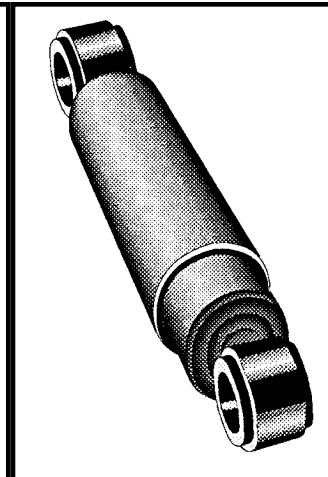

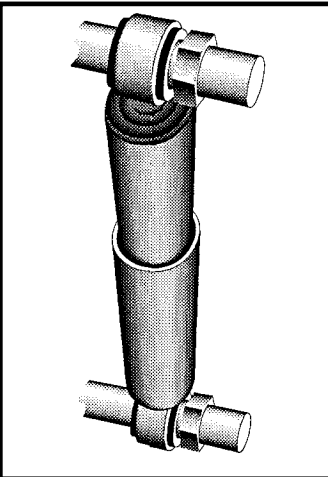

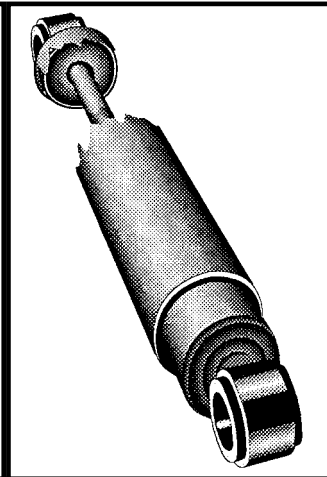

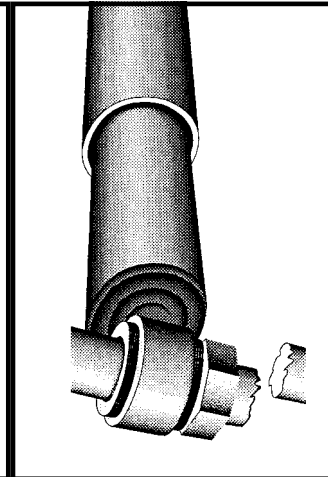

Gabriel®

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

¿Cuándo Deben Cambiarse los Amortiguadores?

Todas las siguientes condiciones indican que ha llegado la hora de cambiar sus amortiguadores. Recuerde que los amortiguadores desgastados pueden causar vibración que ocasiona daños eléctricos, en el bastidor y en el motor. La inspección regular de sus amortiguadores puede prolongar la vida útil de su vehículo.

			
L Fuga (Asegúrese de limpiar la suciedad de la carretera del amortiguador)	UMB/LMB Soporte superior o inferior roto	UBB/LBB Buje superior o inferior roto	BI/S Roto internamente Bloqueado (Atorado en posición colapsada)
	<ul style="list-style-type: none">• Marcha suave ondulante• Inclinación excesiva del frente• Demasiado áspero

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

Guía para Inspeccionar Amortiguadores de Camiones

El mantenimiento de amortiguadores regularmente programado no ocasiona gastos a largo plazo – al contrario, ahorra.

Al igual que con otros componentes del chasis, el mantenimiento regularmente programado para amortiguadores le ayudará a evitar tiempos fuera de servicio no programados y a reducir los costos generales de mantenimiento.

El papel de los amortiguadores ha cambiado dramáticamente. Anteriormente, las suspensiones solían tener muelles de hoja múltiple pesados de carrera limitada y de alta fricción inherente. Tales suspensiones amortiguaban rápidamente, por sí mismas, y por consiguiente, limitaban la cantidad de trabajo que debían realizar los amortiguadores.

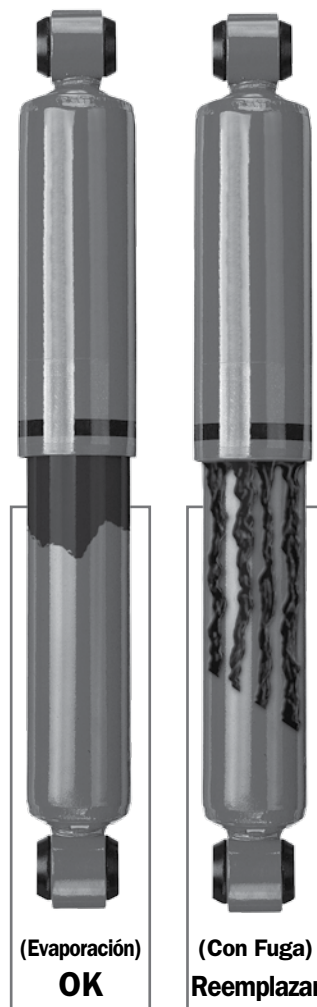

Las suspensiones de baja fricción, como la Suspensión Neumática y de Muelles Ahusados han cambiado dramáticamente el papel que desempeñan los amortiguadores. Los amortiguadores ahora desempeñan un papel decisivo en la tarea de amortiguar la oscilación de la suspensión. Cuando los amortiguadores funcionan correctamente, pueden ayudar a reducir el desgaste de componentes más costosos de la suspensión, tales como bolsas neumáticas, reduciendo al mismo tiempo el desgaste de las llantas y el daño a la cabina y al chasis causado por la vibración. Asimismo, contribuyen a reducir la fatiga del conductor. Los amortiguadores gastados simplemente no pueden cumplir su función de proporcionar control a los sofisticados sistemas de suspensión de hoy en día.

Amortiguadores con Fuga vs. Con Evaporación

Los amortiguadores con evaporación suelen diagnosticarse erróneamente como fallas. La evaporación es el proceso mediante el cual muy pequeñas cantidades de fluido de amortiguador se evaporan a altas temperaturas de operación a través del sello superior del amortiguador. Cuando la “evaporación” se combina con el aire más frío del exterior, se condensa formando una fina película en el exterior del cuerpo del amortiguador. Al mezclarse con desechos de la carretera y polvo, se forma una suciedad que va cubriendo todo el cuerpo del amortiguador. La evaporación es un proceso perfectamente normal y necesario del amortiguador. El fluido que se evapora a través del área del sello ayuda a lubricar y prolongar la vida útil del sello.

A muchos técnicos les resulta difícil distinguir entre un amortiguador que presenta evaporación y uno que presenta una verdadera fuga y que necesita ser reemplazado. Cuando hay una fuga, el amortiguador presenta claros signos de fluido que se escurre del sello superior. Tales escurrimientos pueden verse con mayor facilidad cuando el amortiguador está totalmente extendido, y al inspeccionar lo más profundo posible hacia arriba del amortiguador (debajo de la cubierta de polvo o tubo).

Inspeccione con los amortiguadores totalmente extendidos

¿Cuándo deben cambiarse los amortiguadores?

Hay varios signos que indican que tal vez haya llegado la hora de cambiar los amortiguadores. Inspeccione lo siguiente:

- **Desgaste Desigual de Llantas** – Primero debe revisarse el balanceo
- **Deterioro de la Marcha**
- **Vibración Excesiva**
- **Muelles de Hoja Ahusada Agotados** – Esto no es causado por amortiguadores débiles
- **Desgaste prematuro** de componentes de la cabina y del sistema eléctrico y de aire acondicionado
- **Muelles Neumáticos Rotos o Torcidos** – Los amortiguadores sólo causan esto si están rotos o no están presentes

Gabriel®

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

Haga la Prueba de Calor

Los amortiguadores operan a temperaturas que van desde la temperatura ambiental hasta 350°F. La función de un amortiguador consiste en amortiguar la oscilación de los muelles del camión. A tal efecto, el amortiguador transforma en calor la energía generada por el muelle, para luego disiparla. Como resultado de esto, el amortiguador debe estar de ligeramente tibio a caliente, después de un uso normal.

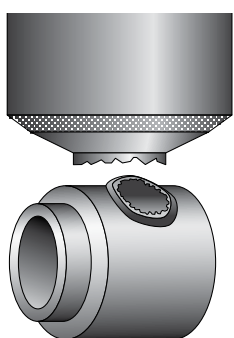

Si se aprecia algún deterioro de la marcha y se sospecha que algún amortiguador ha fallado internamente, lo cual no es detectable visualmente, haga la siguiente "PRUEBA DE CALOR DEL AMORTIGUADOR" unos minutos después de operar el equipo:

1. Conduzca el vehículo a velocidades moderadas por lo menos 15 minutos.
2. Unos minutos después de haber conducido el vehículo, toque con cuidado cada amortiguador, sobre el cuerpo, debajo de la cubierta de polvo o tubo, después de haber tocado una parte cercana del chasis, a fin de establecer una temperatura de referencia ambiental del metal.
3. Todos los amortiguadores deben estar más calientes que el chasis. Si algún amortiguador está notablemente más fresco que su contraparte, en el extremo opuesto del eje, sospeche que existe una falla. Las diferencias de temperatura entre un eje y otro no son indicaciones de falla, pero la temperatura más fresca en cualquiera de los ejes si justifica desmontar y examinar el amortiguador que esté más fresco.
4. Para inspeccionar si existe una falla interna, desmonte y agite el amortiguador sospechoso. Escuche el sonido de las partes metálicas que cascabelean en su interior. Si las partes internas cascabelean quiere decir que el amortiguador tiene una falla interna.

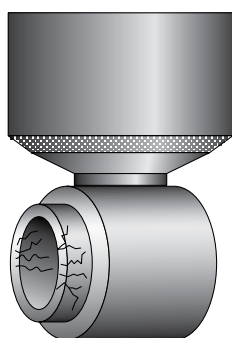

Inspecciones Visuales de los Amortiguadores

Mire si están presentes los siguientes problemas potenciales

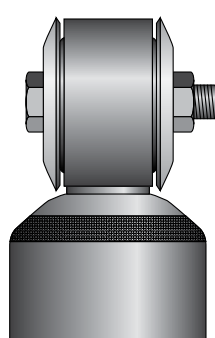

UMB/LMB

Soporte superior o inferior roto

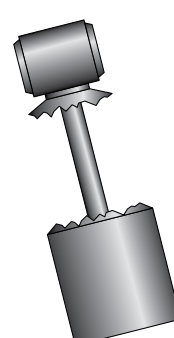

UBB/LBB

Buje superior o inferior roto (los bujes pueden reemplazarse si el diseño lo permite)

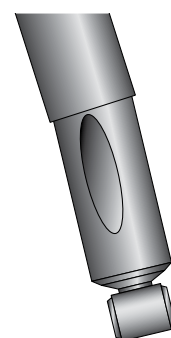

II

Instalación Incorrecta (por ejemplo: arandelas instaladas al revés)

AMORTIGUADORES PARA CAMIONES, SEMIRREMOLQUES Y AUTOBUSES

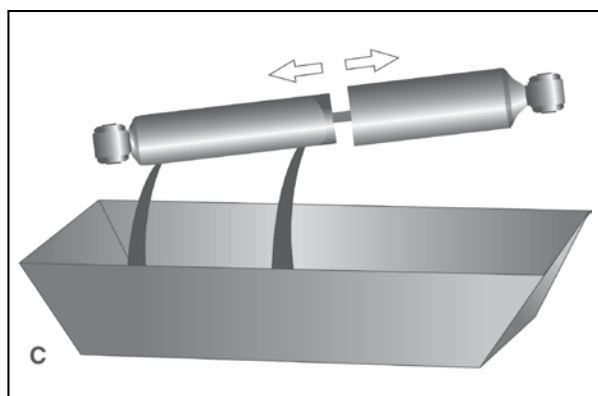

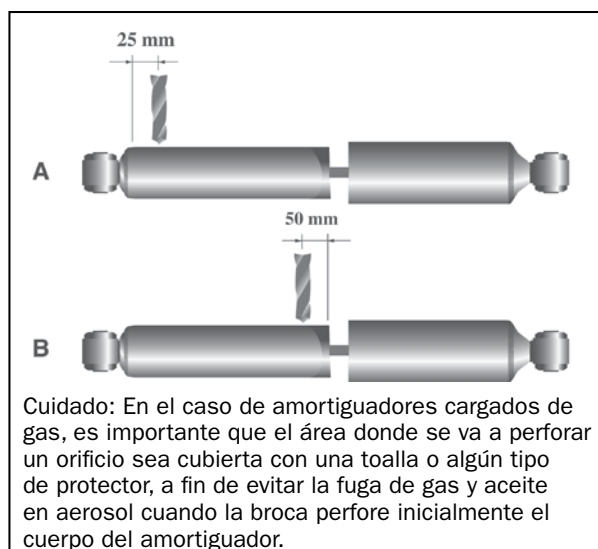

Instrucciones para el Desecho

Nota General

Para retirar el aceite y gas de amortiguadores desechados y defectuosos deben tomarse medidas de protección, tales como el uso de gafas de seguridad y guantes de protección.

Procedimiento

1. Fije el amortiguador en posición horizontal.
2. Extienda totalmente el vástago del pistón antes de perforar la unidad.
3. Utilizando una broca de 1/8" (3 mm), perforo un orificio en dirección hacia abajo, aproximadamente 1.0" (25 mm) del fondo del amortiguador a una profundidad de aproximadamente 1.0" (25 mm) (vea la fig. A).
4. Perfore un segundo orificio de aproximadamente 1/8" (3 mm) a 2.0" (50 mm) de la parte superior del amortiguador a una profundidad de aproximadamente 1.0" (25 mm), para hacer que todo el aceite fluya hacia el exterior (vea la fig. B).
5. Moviendo el vástago del pistón hacia dentro y hacia fuera, comience a accionar la unidad para purgar completamente el aceite del cilindro de ésta (vea la fig. C).

Información Ambiental

6. Acumule todo el aceite usado, **teniendo cuidado de no mezclar aceite con ningún otro desecho o basura.** Almacene el aceite usado en un contenedor aprobado, identificado claramente como "Aceite Usado".
7. Deseche el cuerpo restante y las partes internas del amortiguador de conformidad con los reglamentos Estatales o Municipales locales con respecto a aceite de desecho y otros desechos.
8. Almacene, deseche y transporte el aceite usado de acuerdo con los reglamentos ambientales y reglamentos de programas de aceite usado en su estado o municipio.

El aceite usado de amortiguadores puede depositarse en el mismo contenedor que se utiliza para reciclar aceites de motor. La información sobre dónde desechar el aceite y las otras partes puede obtenerse de las autoridades ambientales o de los proveedores de aceite.

Gabriel®

AMORTIGUADORES PARA CAMIONES,
SEMIRREMOLQUES Y AUTOBUSES

Póliza de Garantía para Amortiguadores Gabriel (Programa de Camiones Pesados)

Garantía Comercial

Los Amortiguadores Gabriel cuentan con la siguiente garantía:

Los Amortiguadores **GasSLX** (Serie 89000) contra defectos de fabricación por dos años a partir de la fecha de compra o por 200,000 millas (322,000 km), lo que ocurra primero.

Los Amortiguadores **FleetLine** (Series 83000, 85000, 85300, 85700, 85900 y 87000) contra defectos de fabricación por un año a partir de la fecha de compra, sin límite de millas.

ESTA GARANTÍA COMERCIAL ESTÁ LIMITADA ÚNICAMENTE AL REEMPLAZO DEL PRODUCTO DEFECTUOSO. No está incluido el costo de embarque, desmontaje e instalación. Esta garantía aplica al comprador original en condiciones de operación normales.

Las disposiciones de esta garantía no aplican a producto: (a) Instalado en cualquier vehículo registrado o usado para fines de carreras o de competencia; (b) usado para cualquier fin distinto al propósito para el cual fue diseñado; (c) que haya sido alterado o sujeto a abuso, negligencia o accidente; (d) que haya sido instalado incorrectamente.

Garantía No Comercial

Los Amortiguadores Gabriel cuentan con la siguiente garantía:

Los Amortiguadores **de Gas para Camionetas** (Serie G60000) contra defectos de fabricación por un año a partir de la fecha de compra o por 25,000 millas (40,250 km), lo que ocurra primero. Esta garantía aplica al comprador original, para uso únicamente en camionetas y vans de pasajeros, en condiciones de operación normales.

ESTA GARANTÍA ESTÁ LIMITADA ÚNICAMENTE AL REEMPLAZO DEL PRODUCTO DEFECTUOSO. No está incluido el costo de embarque, desmontaje e instalación.

Las disposiciones de esta garantía no aplican a producto: (a) Instalado en cualquier vehículo registrado o usado para fines comerciales, carreras o de competencia; (b) usado para cualquier fin distinto al propósito para el cual fue diseñado, (c) que haya sido alterado o sujeto a abuso, negligencia o accidente; (d) que haya sido instalado incorrectamente.

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

L'évolution vers la haute performance

Les performances élevées des véhicules d'aujourd'hui demandent des amortisseurs de plus en plus performants.

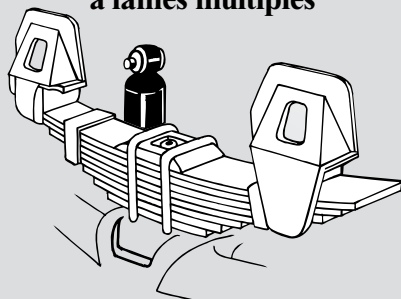

Les ressorts à lames multiples qui équipent les poids lourds possèdent une course très limitée et un coefficient de frottement important. Les ressorts à lames multiples amortissent les oscillations de la suspension, ce qui allège la tâche des amortisseurs.

Les nouvelles générations de suspensions à coefficient de frottement réduit, telles que les suspensions pneumatiques ou à lames paraboliques, possèdent un très faible coefficient d'amortissement et un débattement vertical important. Ces caractéristiques optimisent le contrôle et les performances des nouveaux véhicules. Elles contribuent également à réduire la fatigue du conducteur en isolant mieux les éléments du véhicule ainsi que son chargement des vibrations occasionnées par les routes en mauvais état.

L'évolution des suspensions à coefficient de frottement réduit demande un meilleur contrôle d'oscillation de la suspension, ce qui impose une nouvelle norme de performance des amortisseurs.

Suspension à ressorts à lames multiples

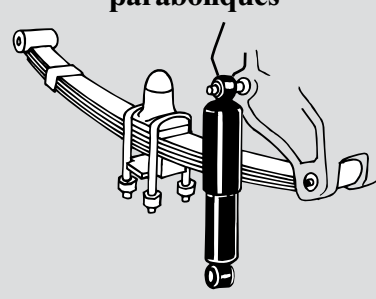

Le coefficient de frottement important de ces ressorts limite le débattement de la suspension à environ 50 à 75 mm (2 à 3 po).

Suspension à ressorts pneumatiques

Dorénavant, le travail d'amortissement est presque entièrement confié aux amortisseurs. Le débattement de ces suspensions peut aller jusqu'à 230 mm (9 po).

Suspension à lames paraboliques

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMQUES ET AUTOBUS

GasSLX (amortisseurs à gaz réglables pour poids lourds)

Série 89000

Amortisseur à gaz réglable de catégorie supérieure pour poids lourds

- Cellule de gaz unique améliorant la rétention du gaz grâce à ses deux points d'étanchéité
- Les trois positions de réglage offrent des gammes d'amortissement adaptées à chaque application
- Alésage de 1 5/8 po et supports à œil soudés à l'arc sur 360° pour une durabilité maximale
- Le fluide haute température spécialement formulé réduit le frottement et l'usure dans des conditions de fonctionnement extrêmes
- Plusieurs composants haut de gamme améliorés contribuent à une performance et une durabilité incomparables

FleetLine (amortisseurs pour poids lourds)

Série 83000*

Amortisseur robuste destiné aux camionnettes ou aux suspensions de poids lourds à dégagement limité.

- Alésage de 1 3/8 po
- Jeu de clapets à 10 étages

Séries 85000 et 85300*

De conception renforcée, ces deux séries constituent la norme pour les suspensions à coefficient de frottement réduit qui équipent les poids lourds d'aujourd'hui.

- Alésage de 1 5/8 po pour une durabilité accrue
- Les supports à œil soudés à l'arc sur 360° évitent les bris
- La butée de rebond hydraulique¹ protège les amortisseurs et les éléments de montage du véhicule contre les dommages dus aux impacts
- La conception du joint de tige de piston multilèvre apporte une protection additionnelle
- Extrémités soudées pour une résistance à la rupture optimale

Série 85700*

Amortisseurs conçus pour répondre aux applications de poids lourds spécifiques et aux autobus soumis à un service intensif. Les caractéristiques spécifiques de cette série assurent une longue durée de vie et un fonctionnement uniforme.

- Alésage de 1 5/8 po et tube renflé augmentant la capacité de fluide et réduisant ainsi la surchauffe
- Le matériau de joint de piston breveté augmente de façon significative sa durée de vie
- Le fluide haute température spécialement formulé réduit le frottement et l'usure dans des conditions de fonctionnement extrêmes
- Comprend également toutes les caractéristiques particulières aux séries 85000 et 85300

* Le joint de piston à auto-compensation assure un fonctionnement uniforme durant toute la vie utile de l'amortisseur

¹ Sur demande.

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

Amortisseurs pour cabines FleetLine

Amortisseurs pour cabines

Amortisseurs conçus spécifiquement pour éliminer les vibrations dans la cabine.

- Un choix d'alésages de 1 po, 1 3/16 po, 1 3/8 po et 1 5/8 po permet d'adapter la capacité d'amortissement à tous les types de cabine
- La cellule de gaz unique³ réduit la perte d'efficacité due à l'effet d'émulsion du fluide
- Jeu de clapets exclusif à 10 étages procurant un confort uniforme sur toute la plage de vitesse du véhicule
- La tige de piston chromée de qualité supérieure augmente la résistance à la corrosion et réduit l'usure du joint de tige de piston
- La conception du joint de tige de piston multilèvre apporte une protection additionnelle et augmente la durabilité

Garantie de
1 AN
et kilométrage
illimité

Amortisseurs pour camionnettes

Série G6000

Amortisseurs conçus pour une performance uniforme et fiable.

Conçus spécifiquement pour les camionnettes et fourgonnettes de tourisme.

- Alésage de 1 3/8 po
- Amortisseurs de type à gaz
- Joint de tige de piston à lèvre radiale
- Applications non commerciales seulement

Garantie de 1
AN
ou 40 000 km
(25 000 mi)

Amortisseurs de direction

- Les supports soudés à l'arc assurent la protection contre le bris et procurent une grande durabilité
- La cellule de gaz unique sépare l'air de l'huile pour un fonctionnement optimal en position horizontale
- Les points de montage de même type que ceux d'origine facilitent l'installation et augmentent la durabilité

Ces amortisseurs partagent les mêmes qualités de conception, de longévité et d'endurance qui ont fait la réputation mondiale de nos amortisseurs d'origine.

³ Selon la conception de l'amortisseur.

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

Amortisseurs pour cabine FleetLine¹

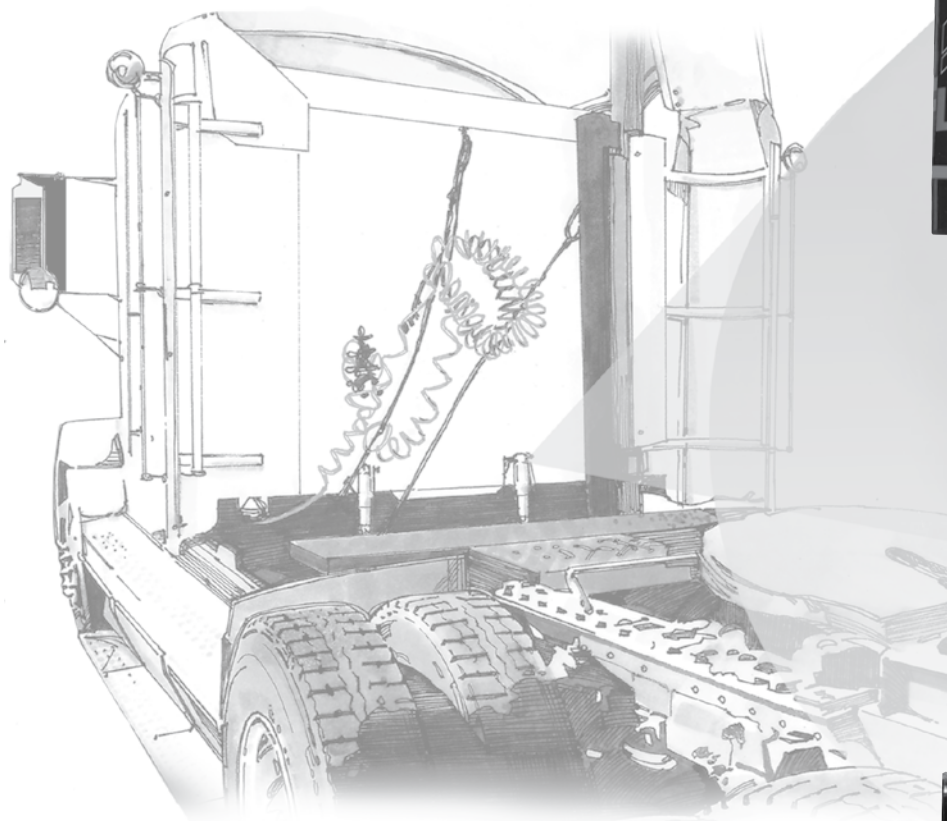

**Amortisseurs conçus spécifiquement pour éliminer les vibrations dans la cabine
(consultez les pages 14 à 18 pour la liste des applications spécifiques).**

Garantie de
AN
et kilométrage
illimité

- La cellule de gaz unique² réduit les pertes d'efficacité
- Jeu de clapets exclusif à 10 étages procurant un contrôle uniforme sur toute la plage de vitesse du véhicule
- La tige de piston chromée de qualité supérieure augmente la résistance à la corrosion et réduit l'usure du joint de tige de piston
- Le joint de tige de piston multilèvre en nitrile augmente la durabilité
- Le fluide toutes saisons assure un rendement uniforme malgré les écarts de température extrêmes

¹ Pour camions seulement

² Selon la conception de l'amortisseur.

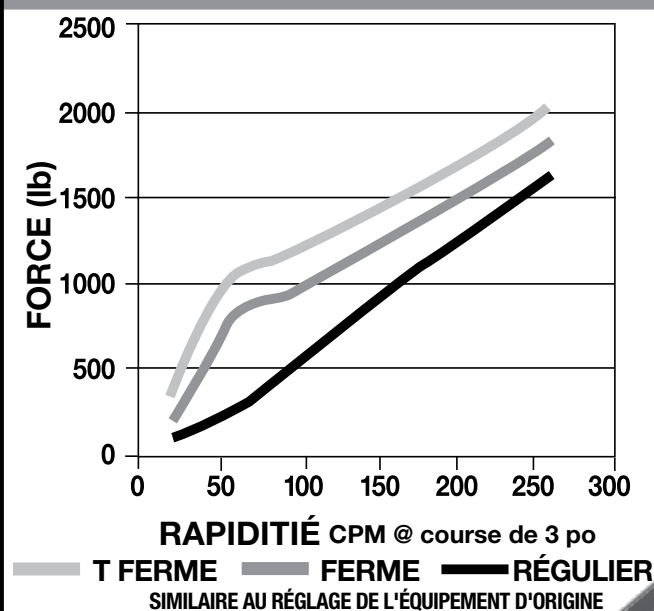

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

GasSLX – Un confort d'exception!

- L'amortisseur GasSLX réglable s'adapte à vos applications grâce à ses trois positions de réglage : ferme, normal et extra ferme.
- Ferme – correspond aux performances d'origine du véhicule
- Normal – apporte une plus grande douceur que celle de l'équipement d'origine
- Extra ferme – procure un meilleur contrôle

Force de détente des amortisseurs à gaz typiques comparée à celle de l'équipement d'origine

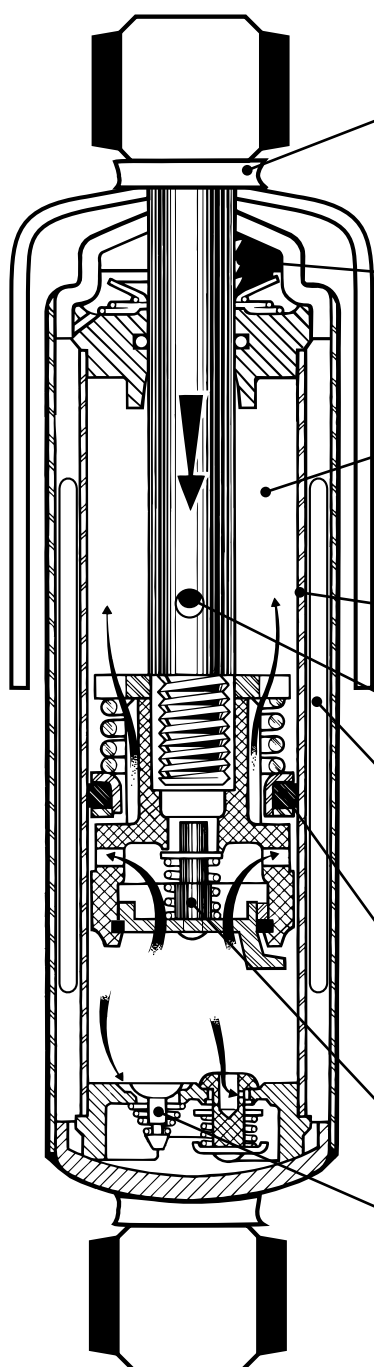

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

GasSLX – Fiabilité, maîtrise, confort et degré
d'amortissement réglable

Une classe supérieure qui fait la différence! Les amortisseurs Gabriel GasSLX sont dotés d'éléments de qualité supérieure reconnus pour faire la différence.

SUPPORTS À ŒIL SOUDÉS À L'ARC SUR 360°
Protègent contre les bris d'amortisseur.

Les suspensions d'aujourd'hui imposent des contraintes multidirectionnelles aux amortisseurs. Une soudure renforcée sur 360° assure une rigidité structurelle supérieure.

Résistance à la rupture améliorée

Procure la résistance accrue nécessaire pour limiter le débattement des suspensions pneumatiques.

JOINT D'ÉTANCHÉITÉ MULTILÈVRE EN VITONL
Joint plus robuste pour une meilleure rétention du fluide et une performance élevée à haute température.

La conception multilèvre du joint retient mieux le fluide.

FLUIDE HAUTE TEMPÉRATURE (HT)
Réduit le frottement et l'usure dans des conditions de température extrêmes.

Les pressions et températures extrêmes peuvent dégrader les fluides d'un amortisseur standard. Le fluide haute température Gabriel HT est spécialement formulé pour maintenir ses propriétés lubrifiantes à des pressions et températures dépassant de deux ou trois fois les limites des fluides pour amortisseur standard.

ALÉSAGE DE GRAND DIAMÈTRE
Alésage de 1 5/8 po. Conception éprouvée du constructeur.

La grande surface de travail de l'amortisseur combinée à l'action du fluide HT garantit une performance et une durabilité sans faille.

BUTÉE DE REBOND HYDRAULIQUE¹
Protège les amortisseurs et les éléments de montage du véhicule contre les dommages dus aux impacts.

En fin de course de détente, l'orifice calibré de la tige de piston se ferme et emprisonne le fluide entre le piston et le haut de l'alésage de l'amortisseur pour créer une zone d'amortissement hydraulique.

CELLULE DE GAZ
La cellule de gaz à l'hexafluorure de soufre (SF6) à joint double assure une parfaite étanchéité au sein de l'amortisseur.

La cellule de gaz sépare l'air du fluide afin de prévenir le phénomène d'émulsion qui mène à une perte d'efficacité.

SEGMENTS DE PISTON EN MÉTAL SOUS EFFET DE PRESSION
La pression hydraulique permet de maintenir les caractéristiques d'amortissement requises.

Lorsque le segment s'use, la pression hydraulique plaque le segment contre le tube afin de maintenir l'étanchéité et les caractéristiques d'amortissement d'origine.

JEU DE CLAPETS À 10 ÉTAGES
Améliore la tenue de route et le confort du conducteur.
Permet de régler indépendamment le degré d'amortissement.

¹ Si la conception l'exige

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

FleetLine

Les composants de qualité d'origine assurent une performance supérieure durant toute la vie utile de l'amortisseur, en plus de réduire l'usure et la fatigue des autres éléments de suspension onéreux de votre véhicule.

Supports formés à froid et soudés à l'arc sur 360°*

- Résistance à la rupture améliorée
- Permet de réduire les bris de support d'amortisseur

Joint multilèvre

- Une protection du joint additionnelle signifie une meilleure rétention du fluide
- Une meilleure rétention du fluide signifie une plus longue durée de vie de l'amortisseur

Alésage de grand diamètre de 1 5/8 po*

- Résistance à la rupture améliorée
- Meilleur contrôle de la suspension
- Conception éprouvée pour les suspensions à coefficient de frottement réduit

Tube renflé**

- Capacité de fluide augmentée
- Températures de fonctionnement plus basses
- Réduction de l'usure interne grâce à une meilleure dissipation de la chaleur

Butée de rebond hydraulique¹

- Évite la surcourse de détente et limite le débattement de la suspension
- Conçus pour les suspensions à coefficient de frottement réduit, p. ex., les suspensions pneumatiques

Joint de piston flottant

- Réduit les variations de force et de vitesse
- Augmente le contrôle à faible vitesse
- Compense automatiquement l'usure
- Une réduction de l'usure entre le cylindre et le joint de piston se traduit par un jeu minimal et une perte d'efficacité réduite
- Une perte d'efficacité réduite signifie un rendement uniforme sur toute la plage de fonctionnement de l'amortisseur

Jeu de clapets à ressort à 10 étages

- Meilleur confort et contrôle plus efficace de la suspension
- Durabilité optimisée
- Effet d'autonettoyage

¹ Si la conception l'exige

* Sauf pour la série 83000

** Incluant les séries 85300 et 85700

Nota : Les caractéristiques peuvent varier selon le numéro de pièce.

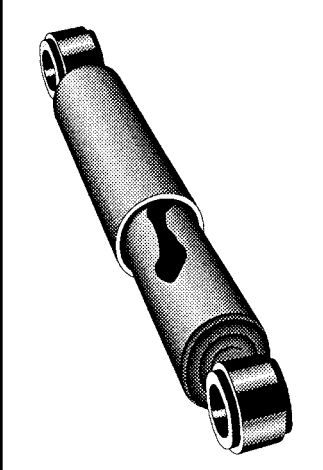

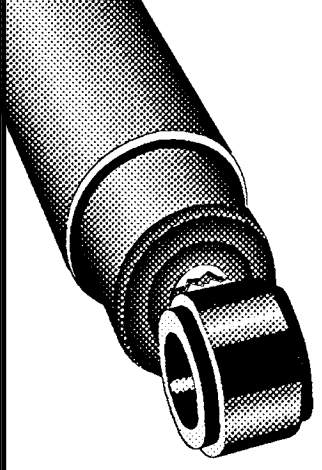

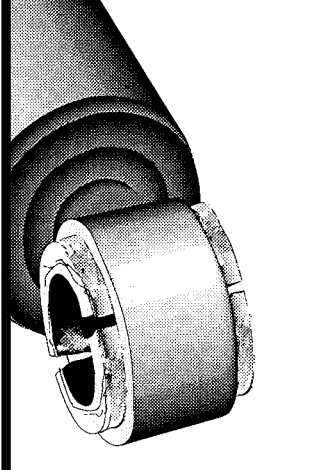

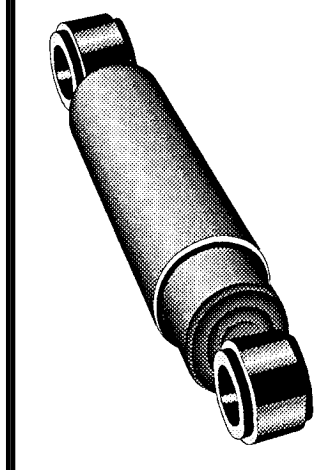

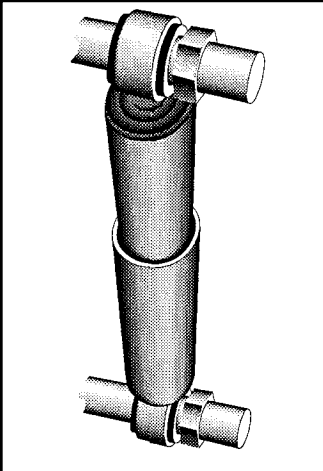

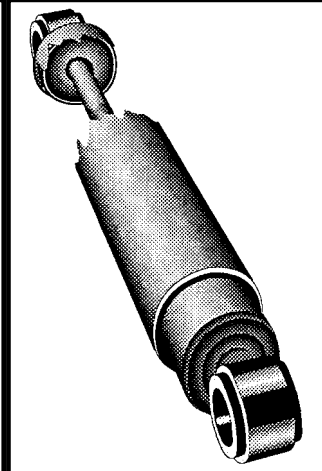

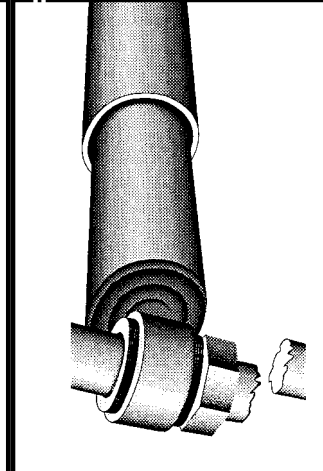

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

Quand faut-il remplacer les amortisseurs

Toutes les conditions suivantes indiquent qu'il est temps de remplacer vos amortisseurs. Notez que des amortisseurs usés peuvent causer des vibrations pouvant engendrer des dommages au système électrique du véhicule, au châssis ou au moteur. Un contrôle périodique de vos amortisseurs peut prolonger la vie utile de votre véhicule.

			
L Fuite (assurez-vous d'essuyer les salissures de la route)	UMB/LMB Rupture du support supérieur ou inférieur	UBB/LBB Rupture de la bague supérieure ou inférieure	BI/S Rupture des éléments internes de l'amortisseur Grip-page (coincé en compression)
	 <ul style="list-style-type: none">• Balancement du véhicule, suspension trop molle• L'avant du véhicule plonge au freinage• Suspension trop dure		
RC Montage inapproprié (par exemple : amortisseur monté à l'envers)	DT Problème de comportement routier	TMF Séparation du tube pare-poussière	Rupture du point de montage du véhicule

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

Guide d'inspection des amortisseurs de camions

Le contrôle périodique des amortisseurs n'est pas une solution coûteuse à long terme, bien au contraire!

Comme pour tout autre composant du véhicule, un programme de contrôle périodique de vos amortisseurs permettra d'éviter les temps morts imprévus et de réduire les coûts d'entretien du véhicule.

Aujourd'hui, le rôle des amortisseurs a changé de façon importante. Jadis, les suspensions de poids lourds comportaient des ressorts à lames multiples qui possédaient une course très limitée et un coefficient de frottement important. Les ressorts à lames multiples amortissent rapidement les oscillations de la suspension, ce qui allège la tâche des amortisseurs.

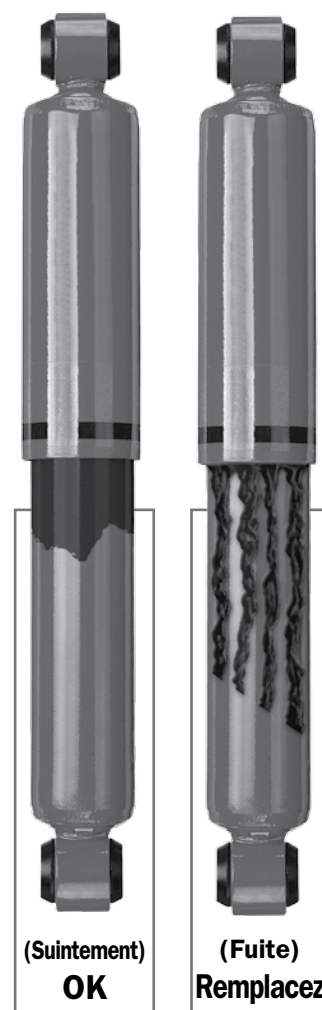

Les suspensions à coefficient de frottement réduit, telles que les suspensions pneumatiques ou à lames paraboliques, ont défié le travail de l'amortisseur. Les amortisseurs jouent maintenant un rôle primordial dans le contrôle d'oscillation de la suspension. Des amortisseurs en bon état peuvent aider à réduire l'usure des éléments plus onéreux de la suspension, tels que les ressorts pneumatiques, tout en réduisant l'usure des pneus et les dommages à la cabine et au châssis causés par les vibrations. Ils préviennent également la fatigue du conducteur. Des amortisseurs usés ne peuvent tout simplement pas assurer le contrôle des systèmes de suspension évolués d'aujourd'hui.

Fuite ou suintement

Un suintement des amortisseurs est souvent interprété comme une déféctuosité. Le suintement est causé par une très faible quantité de fluide qui s'évapore à haute température par le joint supérieur de l'amortisseur. Lorsque cette « vapeur » atteint l'air extérieur, elle se condense et forme une pellicule sur la surface de l'amortisseur. Lorsque les souillures de la route et la poussière s'accumulent, l'amortisseur s'encrasse. Le suintement est un phénomène normal et nécessaire au bon fonctionnement de l'amortisseur. En effet, le fluide qui s'évapore par le joint participe à sa lubrification et prolonge sa durée de vie.

Plusieurs techniciens ne peuvent avec certitude distinguer un amortisseur qui suinte d'un amortisseur qui fuit et qui, par conséquent, doit être remplacé. Une fuite laisse clairement paraître un filet de fluide qui s'échappe par le joint supérieur de l'amortisseur. Une fuite est plus facile à détecter lorsque l'amortisseur est en fin de course de détente, vers le haut du corps principal, sous le pare-poussière.

Vérifiez l'amortisseur lorsqu'il est en fin de course de détente

Quand faut-il remplacer les amortisseurs?

Plusieurs conditions indiquent qu'il est temps de remplacer vos amortisseurs. Recherchez les conditions suivantes :

- **Usure inégale des pneus** - Vérifiez d'abord l'équilibrage des roues
- **Tenue de route qui se dégrade**
- **Vibrations excessives**
- **Affaissement des ressorts à lames paraboliques** - Cette condition n'est pas causée par des amortisseurs peu performants
- **Usure prématurée** des composants de la cabine, des éléments électriques et du système de refroidissement
- **Ressorts pneumatiques endommagés** - Causés par les amortisseurs uniquement s'ils sont cassés ou manquants

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

Essai de température

Les amortisseurs fonctionnent à des températures allant de la température ambiante jusqu'à 175° C (350° F). Le rôle d'un amortisseur consiste à amortir les oscillations de la suspension du camion. Pour ce faire, il doit transformer l'énergie produite par les ressorts en chaleur et la dissiper dans l'atmosphère. Ainsi, un amortisseur qui travaille dans des conditions normales doit devenir légèrement chaud au toucher.

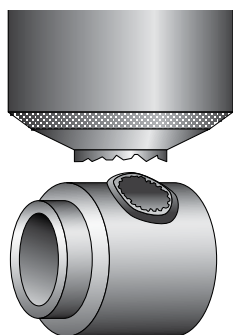

Si la tenue de route du véhicule se dégrade et que l'on suspecte la défaillance interne d'un amortisseur (condition indétectable par un contrôle visuel), procédez à l'ESSAI DE TEMPÉRATURE des amortisseurs après avoir utilisé le véhicule :

1. Roulez à vitesse modérée pendant au moins une quinzaine de minutes.
2. Placez ensuite la main sur chacun des amortisseurs, particulièrement sur la partie du tube qui émerge du pare-poussière, puis sur une partie du châssis du camion afin de pouvoir constater la différence avec la température ambiante.
3. Tous les amortisseurs doivent être plus chauds au toucher que le châssis du camion. Si l'un des deux amortisseurs d'un même essieu semble moins chaud que l'autre, vérifiez l'état de cet amortisseur. Il est possible que la température des amortisseurs diffère d'un essieu à l'autre, mais une différence de température relevée sur un même essieu peut indiquer une défaillance de l'amortisseur moins chaud, et ce dernier doit être déposé pour être vérifié.
4. Pour contrôler l'état des éléments internes de l'amortisseur suspect, il faut d'abord le déposer puis le secouer. Il s'agit de rechercher un bruit métallique à l'intérieur de l'amortisseur. Un bruit métallique qui se produit à l'intérieur de l'amortisseur lorsqu'on le secoue indique une défaillance.

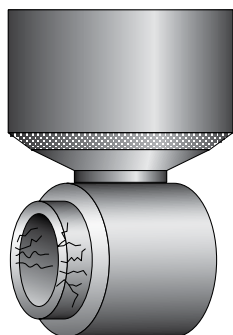

Contrôle visuel des amortisseurs

Recherchez les conditions suivantes :

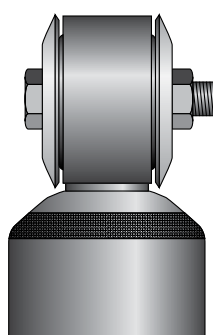

UMB/LMB

Rupture du support supérieur ou inférieur

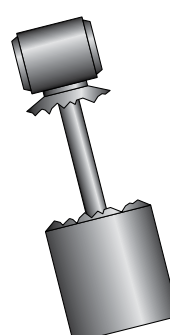

UBB/LBB

Rupture de la bague supérieure ou inférieure (Les bagues sont remplaçables sur certains amortisseurs)

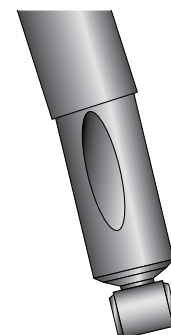

II

Montage inapproprié (par exemple : rondelles installées dans le mauvais sens)

DT

Séparation du tube pare-poussière

Corps plié ou bosselé

Gabriel®

AMORTISSEURS POUR POIDS LOURDS,
SEMI-REMORQUES ET AUTOBUS

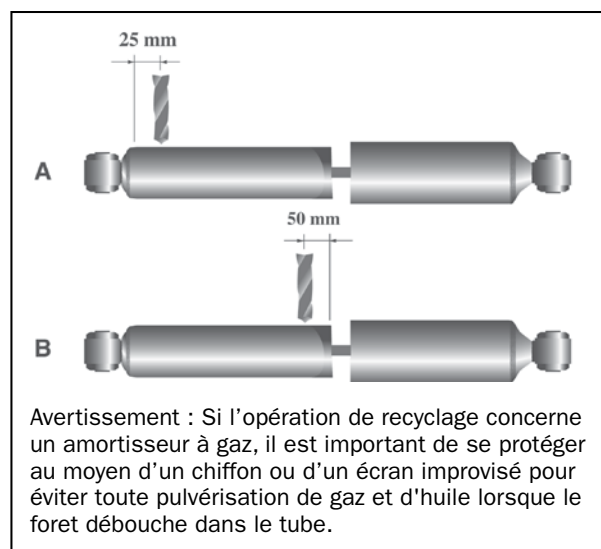

Directives de recyclage des amortisseurs

Remarque générale

Des mesures de protection appropriées, telles que le port de lunettes et de gants de protection, doivent être prises au moment d'extraire l'huile et le gaz d'un amortisseur défectueux et rendu non utilisable.

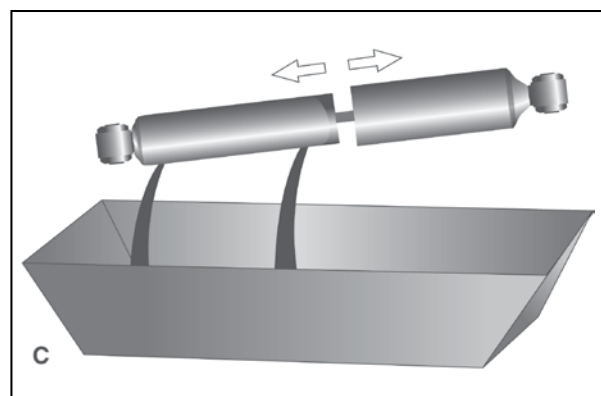

Procédure

1. Immobilisez l'amortisseur en position horizontale.
2. Tirez complètement l'amortisseur jusqu'en fin de course de détente.
3. À l'aide d'un foret de 3 mm (1/8 po), percez un trou perpendiculaire au tube à environ 25 mm (1 po) du bas de l'amortisseur, à une profondeur d'environ 25 mm (1 po) (figure A).
4. Percez un second trou de 25 mm (1 po) à environ 25 mm (1 po) du haut de l'amortisseur, à une profondeur d'environ 25 mm (1 po), de façon que toute l'huile puisse s'en échapper (figure B).
5. Actionnez l'amortisseur sur toute sa course dans les deux sens de façon à purger complètement l'huile du cylindre de l'amortisseur (figure C).

Information environnementale

6. Récupérez la totalité de l'huile en prenant soin de **ne pas la mélanger à d'autres matériaux à recycler**. Entreposez l'huile dans un contenant portant la mention « Huile usée ».
7. Recyclez le reste de l'amortisseur inutilisable en respect des réglementations fédérales ou provinciales relatives aux huiles usées et autres types de déchets.
8. Entreposez, transportez et recyclez l'huile usée en respect des réglementations environnementales fédérales ou provinciales relatives aux huiles usées.

L'huile usée des amortisseurs peut être entreposée dans un contenant utilisé pour le recyclage des huiles à moteur. Les renseignements concernant le recyclage de l'huile et des autres pièces peuvent être obtenus auprès des autorités environnementales ou des fournisseurs d'huile.

Politique de garantie sur les amortisseurs Gabriel (Programme de garantie pour poids lourds)

Garantie commerciale

La garantie des amortisseurs Gabriel se détaille comme suit :

Les amortisseurs GasSLX (série 89000) sont garantis contre tout défaut de fabrication pour une période de deux (2) ans à partir de la date d'achat ou pour 300 000 km (200 000 milles), selon la première éventualité.

Les amortisseurs (séries 83000, 85000, 85300, 85700, 85900 et 87000) sont garantis contre tout défaut de fabrication pour une période de un (1) an à partir de la date d'achat et pour un kilométrage illimité.

CETTE GARANTIE COMMERCIALE SE LIMITE UNIQUEMENT AU REMPLACEMENT DU PRODUIT DÉFECTUEUX. Les frais relatifs à l'expédition, au retrait et à la pose du produit ne sont pas couverts. Cette garantie s'applique au premier acheteur et uniquement lorsque le produit a été utilisé dans des conditions normales de fonctionnement.

Cette garantie ne s'applique pas lorsque le produit : (a) a été installé sur un véhicule utilisé pour la course sur circuit ou pour tout autre événement sportif; (b) a été utilisé à des fins non prévues; (c) a été modifié ou soumis à un usage abusif, à des négligences ou à un accident; (d) a été installé de façon incorrecte.

Garantie non commerciale

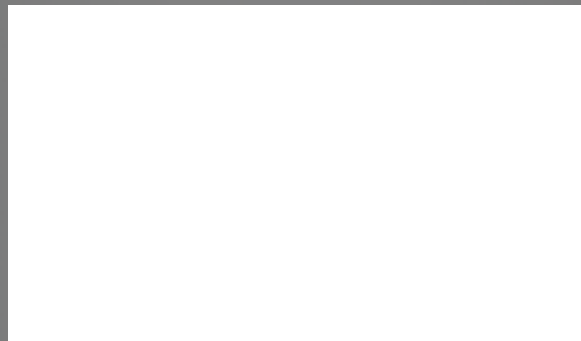

La garantie des amortisseurs Gabriel se détaille comme suit :

Les amortisseurs pour camionnettes (série G60000) sont garantis contre tout défaut de fabrication pour une période de un (1) an à partir de la date d'achat ou pour 40 000 km (25 000 milles), selon la première éventualité. Cette garantie s'applique au premier acheteur et uniquement lorsque le produit a été installé sur une camionnette ou fourgonnette de tourisme et utilisé dans des conditions normales de fonctionnement.

CETTE GARANTIE SE LIMITE UNIQUEMENT AU REMPLACEMENT DU PRODUIT DÉFECTUEUX. Les frais relatifs à l'expédition, au retrait et à la pose du produit ne sont pas couverts.

Cette garantie ne s'applique pas lorsque le produit : (a) a été installé sur un véhicule utilisé pour un usage commercial, pour la course sur circuit ou pour tout autre événement sportif; (b) a été utilisé à des fins non prévues; (c) a été modifié ou soumis à un usage abusif, à des négligences ou à un accident; (d) a été installé de façon incorrecte.
