WHEEL BOLTS and NUTS BOULONS et ÉCROUS DE ROUE

WARNING:

Due to changes that may occur by car manufacturers within a model year and because of variations in hubs and drums, it is highly recommended that the replacement bolt or nut be compared to the original before installation.

Unseated or improperly seated wheel bolts present a serious safety hazard as these bolts may fail due to fatigue. Wheel bolts must be **FULLY** seated by a hydraulic press.

Over-torquing of wheel nuts causes deformed threads and constitutes a serious safety hazard. Always use a reliable torque wrench on clean, gauged and dry threads. Torque to recommended values in proper nut tightening sequence (see owner's manual or vehicle dealer for this information).

A good practice to follow is an alternating or criss-cross tightening sequence that equalizes bolt pressure around the wheel. On dual wheels (truck), inner wheel should be tighter than the outer. Back off outer nut before tightening inner. Another procedure is to tighten each nut to half its specified torque and then repeat, bringing each nut up to its full torque. Recheck all nuts after first trip to take up any slack.

Installing A Wheel Bolt:

- 1) Remove wheel when it is cool to the touch.
- 2) Treat a broken wheel bolt as a warning. Check or replace remaining bolts.
- 3) Press out the damaged bolt.
- 4) Insert and hydraulically press into place the new wheel bolt until the head is firmly seated against the hub. NOTE: The bolt may fail if the head is not fully seated. Do not seat any wheel bolt by pulling them in with a wheel nut.

Tips For Installation:

- 1) Do not over-tighten bolts and nuts. Over-torquing may result in wheel warp, fracture of the stud, galling of the threads or hub distortion
- 2) Do not under-tighten bolts and nuts. Under-torquing will cause the fasteners to loosen and result in poor handling, damage to the stud, wheel bolt hole damage and/or wheel loss.
- 3) Do not fully torque any one fastener at a time. Uneven torquing may warp the rotor and wheel rim.

AVERTISSEMENT:

En raison des changements effectués par les fabricants d'automobiles au cours de l'année et à cause des variations aux moyeux et aux tambours, il est recommandé que les boulons de remplacement soient comparés aux boulons d'origine avant l'installation.

Les écrous de roues non assis ou improprement assis peuvent présenter un danger sérieux, car ces écrous peuvent s'user et ainsi se détériorer gravement. Les écrous de roues doivent être complètement assis en utilisant une presse hydraulique.

Un excès de torsion sur les écrous de roues peut entraîner une déformation des fils et s'avérer fort dangereux. Toujours, utiliser une clef dynamométrique (torque) de qualité sur des fils propres, secs et calibrés. Resserrer selon les normes recommandées et dans une séquence appropriée. Il faut consulter le guide d'utilisation du concessionnaire d'automobiles pour vérifier les renseignements nécessaires.

La bonne marche à suivre consiste à serrer les boulons en alternance; cette méthode contribue à équilibrer la pression du boulon autour de la roue. Pour ce qui est des roues jumelées (camions), la roue intérieure doit toujours être plus serrée que la roue extérieure. Il faut desserrer le boulon extérieur avant de serrer le boulon intérieur. Une autre bonne façon de procéder consiste à serrer chacun des boulons à la moitié du serrage requis, puis répéter cette procédure jusqu'à ce que tous les boulons soient bien serrés à fond selon les spécifications. À la suite du premier trajet effectué par le véhicule, il faut vérifier à nouveau tous les boulons et les resserrer pour éliminer le jeu qui pourrait s'être formé.

L'installation d'un boulon de roue:

- 1) Lorsque tout risque de brûlure est écarté, retirer la roue.
- 2) Chaque boulon brisé constitue un avertissement sérieux qu'il ne faut jamais négliger.
- 3) Retirer le boulon endommagé en le pressant.
- 4) Fixer le boulon de remplacement à l'aide d'une presse hydraulique jusqu'à ce que la tête soit bien assise sur le moyeu : un boulon peut se briser si sa tête n'est pas complètement assise. Ne jamais asseoir un boulon de roue en tirant dessus avec un écrou de roue.

Quelques conseils en ce qui concerne l'installation:

- 1) Ne jamais serrer indûment les boulons et les écrous. Un serrage exagéré peut faire gauchir la roue, causer une rupture de goujon, écorcher l'alésage ou encore causer une distorsion du moyeu.
- 2) Ne jamais serrer insuffisamment les boulons et les écrous. Un serrage insuffisant aura des effets néfastes : desserrage des attaches, perte de contrôle du véhicule, dommage causé au goujon ou au boulon de roue et, le cas échéant, perte de la roue.
- 3) Ne jamais serrer complètement un seul boulon à la fois. Un serrage inégal peut faire gauchir le rotor et la jante de roue.

papco® TORQUE GUIDE

It is recommended that Wheel Nuts be torqued to specifications with a reliable torque wrench to prevent damage and distortion to wheels, discs and drums. Hub face, wheel face and ball seat should be free of dirt or excess paint.

A good practice to follow is an alternating or crisscross tightening sequence that equalizes bolt pressure around the wheel. On dual wheels (truck) inner wheel should be tighter than outer. Back off outer nut before tightening inner.

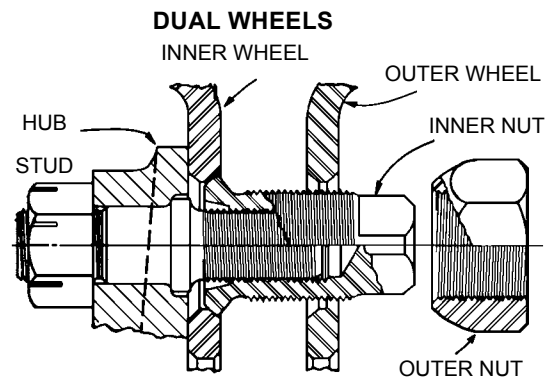

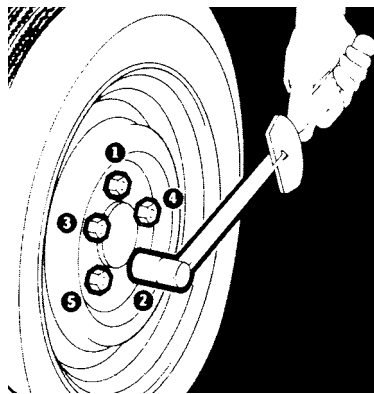

Another procedure is to tighten each nut to half its specified torque and then repeat, bringing each nut up to its full torque. Recheck all nuts after first trip to take up any slack.

GUIDE DYNAMOMÉTRIQUE

Il est recommandé de serrer les écrous de roue en suivant bien les spécifications et en utilisant une bonne clef dynamométrique afin d'éliminer tout risque de dommage et de convulsion aux roues, rondelles et tambours. La face du moyeu et de la roue ainsi que les balles du siège doivent être propres et débarrassés de tout excès de peinture.

Un bon moyen d'installation est de suivre un alternation ou de serrer tranquillement l'écrou pour égaliser la pression avec la roue. Pour des roues jumelées (camion) la roue intérieure doit être plus serrée que la roue extérieure.

Une autre procédure est de serrer chaque écrou juste la moitié de ce qu'elle doit être et répéter pour ensuite serrer chaque écrou complètement et revérifier chaque écrou après le premier voyage pour éviter que les écrous se démanchent.

SPINDLE and AXLE NUTS ÉCROUS D'ESSIEU et FUSSE

New Axle or Spindle Nuts are recommended whenever a wheel hub, rotor, drum or CV joint is removed. Since the spindle or axle nut is relied upon to hold the wheel on the vehicle these fasteners should be replaced each time for safety.

Order by Stock Number

IMPORTANT:

- Follow all manufacturer's specifications for installation, adjustment and torquing.
- Some provinces now require that even the prevailing torque/nylon insert nut be replaced and not reused.
- Spindle/axle nuts are an integral part of any suspension, CV joint, brake and wheel bearing repairs.
- Some applications will require specialty (deep) sockets for the removal and installation of some nuts.

REMARQUES IMPORTANTES:

- Il faut toujours se conformer aux directives du manufacturier lorsqu'on procède à l'installation d'une pièce, à l'ajustement d'une pièce, ou au serrage d'une pièce.
- Dorénavant, quelques provinces exigent que même la vis trilobée et l'insert en nylon soient remplacés: ils ne doivent jamais être réutilisés.
- Le remplacement de l'écrou d'opercule et de l'écrou de fusée fait partie intégrante de l'entretien et réparation de toute suspension, de tout joint homocinétique ("CV") et de tout coussinet à frein.
- Certaines applications nécessiteront des douilles longues (de spécialité) pour retirer et réinstaller divers types d'écrou.

WHEEL PARTS MERCHANTISERS

PRÉSENTOIRS DE PIÈCES DE ROUE SUR CARTE

'Papco' Wheel Parts are merchandised on three easy to stock, space-saving display racks designed for countertop, pegboard wall, gondola or pylon displays. Modular metal display rack measures 16" x 24" and features a bilingual, reversible header sign, 20 safety hooks, inventory control system and a planogram for product layout. Merchandisers No. 022-144 and 145 include a 40 card starter stock and Merchandiser No. 022-146 includes a 20 card starter stock. Bonus cards are included with each merchandiser to offset the cost of the rack.

- 95% vehicle coverage
- Modular self-serve displays
- Inventory control system
- Applications on each card
